Study B-750 November 3, 2022

Memorandum 2022-50

Antitrust Law: Introduction of Study

Earlier this year, a concurrent resolution authorized the Commission[1] to study certain aspects of California's antitrust law. Specifically:

> [T]he Legislature approves for study by the California Law Revision Commission the following new topics:
> (1) Whether the law should be revised to outlaw monopolies by single companies as outlawed by Section 2 of the Sherman Act, as proposed in New York State's "Twenty-First Century Anti-Trust Act" and in the "Competition and Antitrust Law Enforcement Reform Act of 2021" introduced in the United States Senate, or as outlawed in other jurisdictions.
> (2) Whether the law should be revised in the context of technology companies so that analysis of antitrust injury in that setting reflects competitive benefits such as innovation and permitting the personal freedom of individuals to start their own businesses and not solely whether such monopolies act to raise prices.
> (3) Whether the law should be revised in any other fashion such as approvals for mergers and acquisitions and any limitation of existing statutory exemptions to the state's antitrust laws to promote and ensure the tangible and intangible benefits of free market competition for Californians[.][2]

Furthermore, the Legislature directed that:

> before commencing work on this project the California Law Revision Commission shall submit a detailed description of the scope of work to the chairs and vice chairs of the Assembly Committee on Judiciary and the Senate Committee on Judiciary, and any other policy committee that has jurisdiction over the subject matter of the study, and if during the course of the project

---

1. Any California Law Revision Commission document referred to in this memorandum can be obtained from the Commission. Most materials can be downloaded from the Commission's website (www.clrc.ca.gov). Other materials can be obtained by contacting the Commission's staff, through the website or otherwise.

The Commission welcomes written comments at any time during its study process. Any comments received will be a part of the public record and may be considered at a public meeting.

2. 2022 Cal. Stat. res. ch. 147.

> there is a major change to the scope of work, shall submit a description of the change[.][3]

This memorandum introduces the study and discusses how to approach the work. Once the Commission has settled on a general approach, the staff will send the required notice to the specified committee chairs and vice-chairs.

Background materials are attached to this memorandum as an Exhibit, as follows:

	Exhibit p.
• Antitrust Law: An Introduction, Congressional Research Service[4]	1
• Antitrust and "Big Tech", Congressional Research Service	4
• Email from Cheryl Johnson and attachments (10/28/22)	43

This memorandum concludes by briefly reporting on the staff's outreach efforts. The staff had hoped that this memorandum would include recommendations for study consultants, but the staff would like to settle on an approach before acting on that issue.

GENERAL APPROACH TO CONDUCT OF STUDY

The Legislature specifically identified four topics for study by the Commission. They can be summarized as follows:

(1) Whether California law should be revised to outlaw monopolies by single companies as outlawed by Section 2 of the federal Sherman Act.[5]
(2) Whether, in the context of technology companies, the existing standard for antitrust injury should be broadened.
(3) Whether California should be directly involved in the approval of mergers and acquisitions.
(4) Whether any changes should be made to existing exemptions to California's antitrust law.

The staff sees two general ways in which to approach that work. First, the study could be segmented and conducted incrementally, with work on each of the specifically-assigned topics completed before beginning the next. Second, the

---

3. *Id*.

4. The Congressional Research Service reports include an express statement that they may be reproduced and exhibited. See Exhibit pp. 3, 42.

5. 15 U.S.C. § 2.

Commission could address all of the issues simultaneously, as a unified whole (i.e., “holistically”).

The staff sees significant process advantages to an incremental approach, as discussed further below. The advantages of a holistic approach are also discussed below.

Advantages of Incremental Approach

The main advantage of an incremental approach is that it would allow the Commission to ease into the subject. Antitrust law and policy are complex and contentious. The Commission has no prior experience working on the topic. It would be much easier to begin the study and start making immediate progress if the focus were limited to one discrete topic at a time.

For example, in order to begin work on the first topic, the Commission would only need to learn about the law and policy surrounding enforcement of the federal monopoly prohibition, experience in the states that have their own monopoly prohibitions,[6] and the pros and cons of enforcement in state courts rather than federal courts. Information needed to study the other topics could be acquired later, as the study moves on to those other topics.

An incremental approach would also provide similar benefits to the Legislature, when the Commission reaches the point of making reform recommendations. It is much easier for legislative committees to evaluate proposed reforms when they are presented in isolation, rather than as part of an omnibus package.

In the staff’s experience, narrow bills also have a greater chance of enactment. If a bill only includes a single reform, the fate of the bill is decided by Legislators’ views on the merits of that reform. If a bill includes a number of reforms, different legislators may have concerns about different parts of the bill. Some legislators may oppose part 1 of a bill, while others oppose part 2. When those two groups of legislators are aggregated, there may not be enough support for the bill as a whole to achieve enactment.

The history of prior attempts to enact a single-company monopoly prohibition in California seems to demonstrate the point. In 2002, Senator Joseph Dunn introduced Senate Bill 1814. The bill would have revised California law to

---

6. In 2006, the Senate Committee on Judiciary reported that there were over 35 states that had their own state law prohibitions on monopolies. See Senate Committee on Judiciary Analysis of Senate Bill 1274 (May 9, 2006).

add a prohibition on monopolies ("It shall be unlawful for any person to monopolize, or attempt to monopolize, or to combine or conspire with any person or persons to monopolize, any part of trade or commerce."). That proposal drew opposition, which might have been enough on its own to defeat the bill.[7] However, the bill also addressed a second antitrust issue. It would also have provided that an antitrust conspiracy can exist between two entities that have shared ownership (e.g., parent and subsidiary companies). That second proposal drew its own opposition, based on a different set of legal and policy arguments.[8] The combined opposition might have increased the number of legislators who had concerns about the bill. Senate Bill 1814 died in committee in the Assembly.

In 2006, Senator Dunn introduced Senate Bill 1274, which would again have outlawed single-company monopolies in California. It also addressed a second antitrust topic (proposing substantive changes to the standard for summary judgment in an antitrust case). As before, the inclusion of two distinctly different substantive reforms increased the scope of the opposition arguments.[9] Senate Bill 1274 died on the Senate floor.

Advantages of Holistic Approach

The main advantage of the holistic approach is that it would allow analysis of every issue in the context of all the other issues. This could be valuable, or even necessary, if there are inextricable connections between the assigned topics. For example, if answering the question of whether California should outlaw single-company monopolies depends in some essential way on the governing standard for antitrust injury, then it would be advisable or necessary that those two issues be studied together.

It is also possible that a holistic approach would expose useful synergies between the different topics, which might have been missed if the topics were studied in isolation.

The materials provided by Cheryl Johnson, a retired antitrust attorney, provide examples of how a holistic approach to antitrust reform could be

8. See Senate Committee on Judiciary Analysis of Senate Bill 1814, pp. 4-6. (April 23, 2002).
9. See Senate Committee on Judiciary Analysis of Senate Bill 1274, pp. 21-22 (May 9, 2006).

structured.[10] She also provides helpful references to background materials and potential expert contacts. Her assistance is greatly appreciated.

Discussion

The incremental approach offers significant advantages over the holistic approach. It would allow the Commission to ramp up its subject matter knowledge gradually, as each topic is studied. It would produce a series of discrete reform proposals for the Legislature to consider, which would simplify their work and allow each proposal to be considered on its individual merits.

The main reason to reject the incremental approach would be if holistic analysis is necessary for thorough treatment of the assigned topics. In other words, if there are inextricable links between the topics, such that incremental analysis would miss necessary information, then the holistic approach should be used instead.

While there are connections between the topics, the staff does not believe that those connections are so immediate as to necessitate a holistic approach.

For example, the question of whether to add a monopoly prohibition to California law seems to turn on questions that are distinct from the main questions for each of the other assigned topics.

Because the California Attorney General already has standing to enforce the federal monopoly provision in federal court,[11] the main effect of adding a similar state law prohibition would be the ability to bring cases in California courts. This would result in the application of general California law in such cases. It would also allow for the development of California case law on monopoly specifically, which could then diverge from the federal case law over time. The Commission will need to determine and weigh the advantages and disadvantages of such a change. It should determine the key differences in federal and California law that would govern such actions. It could also examine the experience in the 35 or more states that already have a state law monopoly prohibition, to learn whether they have experienced any problems as a result.

Those questions do not seem to be essentially connected to the main questions in the other assigned topics, which the staff expects will include the following:

---

10. See Exhibit pp. 43-61.

11. 15 U.S.C. § 15c.

- *Standard of antitrust injury:* How can a standard that is based on consumer prices be applied to services that are "free"? Are there concerns other than consumer prices that should be addressed by antitrust law, such as obstacles to market entry and innovation, undue invasion of privacy, and consolidation of the press? Are there injury standards in other jurisdictions that might be adopted in California? What would be the effect of making changes to the standard?
- *State review of mergers and acquisitions.* What purpose would be served by California establishing its own system to review proposed mergers and acquisitions? What are the alleged deficiencies of the federal system? How would merger review be administered at the state level and at what cost?
- *Review of existing exemptions*. What are the special circumstances that justified each of the existing exemptions from California's antitrust law? Have the original justifications held up over time?

The staff believes that each of the assigned topics could be considered in isolation, without causing any significant problems. Public comment on that point would be helpful.

What general approach would the Commission like to use in conducting this study?

If the Commission decides on an incremental approach, the staff recommends starting with the single-company monopoly issue. Of the assigned topics, it seems the most straightforward. Once the Commission completes work on that topic, it could decide which of the remaining topics would be addressed next.

OUTREACH

Because of the complexity and importance of the issues in this study, it is critical that a wide range of experts and interested groups be involved in the Commission's deliberations. The staff has been reaching out to invite their participation in this study and will continue to do so. **Suggestions for further outreach would be appreciated.**

The staff contacted the office of Assembly Member Cunningham (the principal author of ACR 95). He has agreed to provide some opening remarks at the November meeting.

Staff also contacted the Antitrust Section of the California Lawyers Association (which includes both plaintiff and defense attorneys), the Antitrust

Section of the California Department of Justice, and the California Judges Association.

In addition, the staff has communicated with Dan Robbins, who is President of the Uniform Law Commission and a member of the California Commission on Uniform State Laws. The ULC is also currently studying antitrust law.

All of the groups that are listed as supporting ACR 95 were contacted (there was no reported opposition to ACR 95):

American Economic Liberties Project
California Conference of Machinists
California Labor Federation
California Teamsters Public Affairs Council
Center for Public Interest Law
Consumer Attorneys of California
Consumer Federation of California
Consumer Watchdog
Electronic Frontier Foundation
Foundation for Fairness in Commerce
Media Alliance
UFCW Western States Council
United Steelworkers District 12
Writers Guild of America West[12]

The staff also reached out to the American Antitrust Institute, which expressed support for the 2002 and 2006 single-company monopoly bills that were discussed above.

In addition, the staff is in the process of reaching out to groups that opposed the 2002 and 2006 bills, including the following:

Association of California Life and Health Insurance Companies
California Association of Realtors
California Bankers Association
California Chamber of Commerce
California Financial Services Association
California Healthcare Institute
California Manufacturing & Technology Association
California Mortgage Bankers Association
California Restaurant Association
California Retailers Association
Civil Justice Association of California
Personal Insurance Federation of California
Western States Petroleum Association[13]

12. See Assembly Committee on Judiciary Analysis of ACR 95 (Cunningham & Wicks) (7/6/21); Senate Committee on Judiciary Analysis of ACR 95 (Cunningham & Wicks) (June 28, 2022).

Members of the public are encouraged to alert any other persons or groups that might be interested in this study. The Commission's website includes a form that can be used to subscribe to the mailing list for the study.[14]

Respectfully submitted,

Brian Hebert
Executive Director

Informing the legislative debate since 1914

IN FOCUS

Updated July 21, 2022

Antitrust Law: An Introduction

Recent years have witnessed a resurgence of both popular and political interest in antitrust. This renewed attention has produced a flurry of legislative activity, with several Members of Congress introducing proposals to reform various elements of competition law. This In Focus provides an overview of antitrust doctrine and selected antitrust legislation pending before Congress.

The Goals of Antitrust

The antitrust laws are designed to protect economic competition. At that level of generality, there is little controversy. However, there is profound disagreement about antitrust's more specific goals. Safeguarding "competition" can mean a variety of things, and disputes about the appropriate targets of antitrust policy have persisted since its inception.

Economists tend to approach this issue with similar discussions of the effects of *market power*—the ability of a firm to profitably charge prices above levels that would prevail in a competitive market. Economic theory identifies two relevant effects. First, market power can produce *allocative inefficiency*: when prices exceed competitive levels, some consumers who would have purchased a product at the competitive price choose to forgo it or substitute less desired alternatives. Thus, market power can lead to suboptimal allocations of scarce resources. Second, market power can result in *wealth transfers*: consumers who buy a product at an uncompetitive price are poorer than they would be in a competitive market, while the seller is richer.

Today, antitrust is principally concerned with preventing anticompetitive conduct that enables firms to exercise market power. However, the distinct effects of market power highlight a fissure in the debate over antitrust's more foundational goals. In a narrow subset of cases, efficiency and consumer welfare may pull in opposite directions. For example, some mergers may lower production costs, but also increase market power. Some commentators—advocates of a "total welfare" standard—maintain that antitrust should permit such transactions as long as the gains in productive efficiency outweigh the losses in allocative efficiency and consumer welfare. By contrast, defenders of the "consumer welfare" standard advocate blocking such deals when they are likely to effectuate a wealth transfer from consumers to producers. Although the competition laws of some countries embrace the total-welfare standard, U.S. antitrust doctrine prioritizes consumer welfare and does not typically permit producer gains to offset downstream harms.

While the consumer-welfare standard thus plays a central role in contemporary U.S. antitrust, some have suggested that it is both descriptively and normatively incomplete. One point of contention involves anticompetitive conduct by *buyers*, which most directly harms sellers rather than end consumers. Whether—and how—such harms are relevant under the consumer-welfare standard is a complicated question. In some cases, reductions in buy-side competition *do* harm consumers. For example, a merger that gives a firm the ability to depress input prices by purchasing less may harm consumers by leading to lower output. In other buy-side cases, however, injuries may be limited to sellers. For example, a merger might increase a firm's bargaining leverage with suppliers without giving it incentives to purchase fewer inputs. In that case, the main effect of diminished competition may be a wealth transfer from sellers to the powerful buyer, without any effects on final output. Powerful buyers may even benefit consumers by passing along some of their cost savings. Some commentators have appealed to these fact patterns to argue that "trading partner welfare" or safeguarding the "competitive process" represent more descriptively accurate and normatively desirable benchmarks for antitrust policy than consumer welfare. The possible tension between these goals and the consumer-welfare standard may become increasingly salient as antitrust enforcers take a greater interest in labor markets, where workers rather than consumers are the most direct victims of anticompetitive conduct.

The above discussion does not exhaust the possible ends that antitrust can serve. There is a long-standing debate over whether antitrust should promote "noneconomic" objectives like personal liberty, protecting small entrepreneurs, or preserving the integrity of the political process. Although there has recently been a resurgence of interest in such goals among some antitrust commentators, those considerations have not played an explicit role in the development of antitrust decision rules for several decades.

The Key Statutes

The persistence of disputes over antitrust's goals may be partially attributable to the sparseness of the key federal antitrust statutes. The three core provisions—Sections 1 and 2 of the Sherman Act and Section 7 of the Clayton Act—are succinct and vague, effectively granting the federal courts common law authority to fashion competition policy based on prevailing economic theories.

Section 1 of the Sherman Act: Restraints of Trade

Section 1 of the Sherman Act prohibits contracts "in restraint of trade." Under Section 1 doctrine, a few types of agreements are *per se* illegal because they almost always harm competition. The *per se* category now encompasses horizontal price fixing, horizontal market allocation, and some horizontal boycotts. (In antitrust parlance, agreements

between competitors are described as "horizontal," while agreements between firms at different points in a distribution chain are described as "vertical.")

While a narrow range of conduct remains *per se* illegal under Section 1, most agreements are evaluated under what is called the *Rule of Reason*, which requires plaintiffs to establish that a defendant has market power and that a challenged restraint harms competition. Today, many horizontal restraints and all vertical restraints except tying arrangements—which are governed by a special test—are subject to the Rule of Reason. Courts ordinarily employ some variation of a three-part burden-shifting framework in Rule-of-Reason cases. Under that framework, plaintiffs bear the initial burden of proving that a challenged restraint has a substantial anticompetitive effect. If the plaintiff carries that burden, the defendant must then adduce a procompetitive rationale for the restraint. If the defendant can do so, then the burden shifts back to the plaintiff to show that the procompetitive efficiencies could be reasonably achieved through a less anticompetitive means.

Federal courts have also held that some restraints that are not *per se* illegal can nevertheless be condemned under Section 1 without a full Rule-of-Reason analysis. The framework for these "quick look" cases is not definitively settled, but the basic idea is that some types of conduct are inherently suspect even if they are not *per se* illegal. As a result, plaintiffs can prevail in such cases without detailed market analysis or proof of anticompetitive harm. Courts have applied the "quick look" analysis to horizontal restraints involving self-regulation of learned professions, output restrictions in markets that require some cooperation among competitors, and anticompetitive agreements that arguably have noncommercial motivations.

Section 2 of the Sherman Act: Monopolization

While Section 1 of the Sherman Act governs multilateral restraints of trade, Section 2 prohibits unilateral anticompetitive conduct by dominant firms—in a word, monopolization. Section 2 does not prohibit "bigness" standing alone. Rather, monopolization is a two-element offense: plaintiffs must establish that a firm with *monopoly power* (a large degree of market power) engaged in *exclusionary conduct*.

Courts and legal academics have struggled to formulate a general standard for distinguishing exclusionary conduct from legitimate competition on the merits. Instead of relying on such a standard, the case law has developed a variety of conduct-specific tests, along with a burden-shifting framework that broadly mirrors the Rule-of-Reason inquiry under Section 1. While a detailed review of monopolization law is beyond the scope of this In Focus, much of the conduct challenged under Section 2 falls into the following categories: *exclusionary pricing* (e.g., below-cost pricing intended to eliminate rivals); *refusals to deal* (e.g., denial of access to essential infrastructure or technology); *exclusionary distribution* (e.g., tying, bundling, or exclusive dealing); *misuse of institutions* (e.g., abuse of standard-setting organizations or enforcement of fraudulent patents); and *exclusionary product design* (i.e., designing products in ways that make it difficult for rivals to produce substitutes).

Section 7 of the Clayton Act: Mergers

Section 7 of the Clayton Act prohibits mergers and acquisitions that threaten "substantially to lessen competition, or to tend to create a monopoly." Today, merger control is largely a bureaucratic affair. The Department of Justice and Federal Trade Commission—the federal antitrust enforcers—play a central role in merger law via the Hart-Scott-Rodino "preclearance" process and the promulgation of merger guidelines. Substantively, Section 7 doctrine has shifted from a largely structural approach that prevailed in the 1950s and 1960s—which heavily emphasized market concentration levels and was highly skeptical of consolidation—to more flexible inquiries into the details of specific industries and theories of harm. In horizontal mergers, the regulators typically evaluate two possible harms: *coordinated effects* (i.e., whether a transaction will facilitate collusion or parallel pricing) and *unilateral effects* (i.e., whether a transaction will give a firm unilateral pricing power). In vertical mergers, by contrast, the agencies assess whether a transaction will foreclose rivals' sources of supply or distribution, raise entry barriers, facilitate the exchange of competitively sensitive information, or enable collusion.

Selected Legislation

The 117th Congress has featured several bills that would reform various aspects of antitrust law.

Restraints of Trade. S. 2375, S. 483, and H.R. 1367 would prohibit non-compete agreements in employment contracts, subject to certain exceptions. Under current Section 1 doctrine, non-competes typically receive lenient judicial scrutiny.

Monopolization. S. 225—the most comprehensive antitrust legislation in the 117th Congress—would broaden the legal standard for monopolization and change several doctrinal rules in the monopolization case law.

Mergers. S. 225 would also expand Section 7 of the Clayton Act and require the parties to certain large mergers to bear the burden of proving that their transactions do not harm competition. S. 3847, S. 1074, and H.R. 7101 would categorically prohibit mergers that exceed certain numerical thresholds involving firm size, transaction size, market share, and market concentration.

Big Tech. Other legislation would reach beyond general antitrust and apply a variety of special competition rules to large technology platforms (S. 3197, S. 2992, H.R. 3849, H.R. 3826, H.R. 3825, and H.R. 3816).

September 11, 2019

Jay B. Sykes
Legislative Attorney

Antitrust and "Big Tech"

Over the past decade, Google, Amazon, Facebook, and Apple ("Big Tech" or the "Big Four") have revolutionized the internet economy and affected the daily lives of billions of people worldwide. While these companies are responsible for momentous technological breakthroughs and massive wealth creation, they have also received scrutiny related to their privacy practices, dissemination of harmful content and misinformation, alleged political bias, and—as relevant here—potentially anticompetitive conduct. In June 2019, the Wall Street Journal reported that the Department of Justice (DOJ) and Federal Trade Commission (FTC)—the agencies responsible for enforcing the federal antitrust laws—agreed to divide responsibility over investigations of the Big Four's business practices. Under these agreements, the DOJ reportedly has authority over investigations of Google and Apple, while the FTC will look into Facebook and Amazon.

The DOJ and FTC investigations into Big Tech will likely involve inquiries into whether the relevant companies have illegally monopolized their respective markets or engaged in anticompetitive mergers or acquisitions. Under Section 2 of the Sherman Act, it is illegal for a company with monopoly power to engage in exclusionary conduct to maintain or enhance that power. And under Section 7 of the Clayton Act, companies may not engage in mergers or acquisitions that "substantially lessen" competition.

The scope of the market in which a defendant-company operates is a key question in both monopolization and merger cases. The Supreme Court has identified certain qualitative factors that courts may consider in defining the scope of relevant antitrust markets. The DOJ and FTC have also adopted a quantitative market-definition inquiry known as the "hypothetical monopolist" or "SSNIP" test, according to which a relevant antitrust market consists of the smallest grouping of products for which a hypothetical monopolist could profitably impose a 5% price increase. The application of this quantitative inquiry to certain zero-price technology markets may present courts and regulators with important issues of first impression. However, commentators have proposed a variety of methods by which regulators could assess the scope of the markets in which the Big Four operate.

In addition to demonstrating that a defendant-company possesses monopoly power in a properly defined market, monopolization plaintiffs must show that the defendant engaged in exclusionary conduct to maintain or enhance that power. In investigating allegedly exclusionary behavior by the Big Four, antitrust regulators may be evaluating

- Google Search's alleged discrimination against Google's vertical rivals, certain tying and exclusive-dealing arrangements related to the company's Android mobile operating system, and exclusive and restrictive-dealing arrangements related to the company's ad-brokering platform;
- Amazon's alleged predatory pricing and discrimination against third-party merchants on its online marketplace;
- Facebook's allegedly anticompetitive pattern of acquiring promising potential competitors, including its acquisitions of the photo-sharing service Instagram and the messaging service WhatsApp; and
- Apple's decision to design its mobile-operating system to prevent customers from downloading iPhone apps from any source other than the company's App Store.

While the antitrust action surrounding Big Tech is currently concentrated in the executive branch and the courts, digital competition issues have also attracted the interest of Congress, which may pursue legislation to address anticompetitive conduct by large technology companies. Specifically, some commentators have proposed that Congress adopt changes to certain elements of antitrust law to promote competition in technology markets, including modifications to predatory-pricing doctrine, exclusionary-design law, and merger review. In contrast, other commentators have advocated sector-specific competition regulation for large technology companies that would include data-portability rules, interoperability standards, nondiscrimination requirements, and separation regimes.

Author Information 36

Over the past decade, Google, Amazon, Facebook, and Apple—collectively known as the "Big Four" or "Big Tech"—have revolutionized the internet economy and affected the daily lives of billions of people worldwide. Google operates a search engine that processes over 3.5 billion searches a day (Google Search),[1] runs the biggest online video platform (YouTube),[2] licenses the world's most popular mobile operating system (Android),[3] and is the largest seller of online advertising.[4] Amazon is a major online marketplace, retailer, logistics network, cloud-storage host, and television and film producer.[5] Facebook boasts 2.4 billion monthly active users worldwide, meaning more people use the social network than follow any single world religion.[6] Apple popularized the smartphone, making the device so ubiquitous that consumers have grown accustomed to carrying a supercomputer in their pocket.[7] Collectively, the Big Four generated over $690 billion in revenue in 2018—a sum larger than the annual GDPs of most national economies.[8]

While these companies are responsible for momentous technological breakthroughs and massive wealth creation, they have also received scrutiny related to their privacy practices, dissemination of harmful content and misinformation, alleged political bias, and—as relevant here—potentially anticompetitive conduct.[9] In June 2019, the Wall Street Journal reported that the Department of Justice (DOJ) and Federal Trade Commission (FTC)—the agencies responsible for enforcing the federal antitrust laws—agreed to divide responsibility over investigations of the Big Four's business practices. Under these agreements, the DOJ reportedly has authority over investigations of Google and Apple, while the FTC will look into Facebook and Amazon.[10] The following month, the DOJ announced a potentially broader inquiry into Big Tech. Specifically, the Justice Department's Antitrust Division revealed that it intends to examine possible abuses of market power by unnamed "market-leading online platforms"[11]—an announcement that has led some to

speculate that a number of the Big Four may face investigations from both agencies despite the previously reported agreements.[12]

Big Tech's business practices have also attracted congressional interest. In May 2019, the Senate Judiciary Committee held a hearing to investigate privacy and competition issues in the digital advertising industry.[13] And in June and July, the House Judiciary Committee held two separate hearings examining the market power of online platforms.[14]

This report provides an overview of antitrust issues involving the Big Four. The report begins with a general outline of the aspects of antitrust doctrine that are most likely to play a central role in the DOJ and FTC investigations—specifically, the case law surrounding monopolization and mergers. Next, the report discusses the application of this doctrine to each of the Big Four. Finally, the report concludes by examining policy options related to the promotion of digital competition.

Legal Background

General Principles

Contemporary antitrust doctrine reflects a commitment to the promotion of economic competition, which induces businesses to cut costs, improve their productivity, and innovate.[15]

[15] Ohio v. Am. Express Co., 138 S. Ct. 2274, 2290 (2018) (explaining that the "primary purpose" of antitrust law is to promote competition) (citation omitted); N.C. State Bd. Of Dental Examiners v. FTC, 135 S. Ct. 1101, 1110 (2015) (explaining that antitrust law embodies "fundamental national values of free enterprise and economic competition") (citation omitted); HERBERT HOVENKAMP, FEDERAL ANTITRUST POLICY: THE LAW OF COMPETITION AND ITS PRACTICE § 1.1 (5th ed. 2016). While contemporary antitrust doctrine focuses on the promotion of economic competition, early and mid-20th century antitrust case law often reflected a concern with other goals, including the protection of small businesses and preservation of political equality. *See* Thomas E. Kauper, *Influence of Conservative Economic Analysis on the Development of the Law of Antitrust*, *in* HOW THE CHICAGO SCHOOL OVERSHOT THE MARK: THE EFFECT OF CONSERVATIVE ECONOMIC ANALYSIS ON U.S. ANTITRUST 43 (Robert Pitofsky ed., 2008) (describing the Supreme Court's early and mid-20th century antitrust doctrine as "highly interventionist, concerned as much (or more) with the well-being of small entrepreneurs as with efficiency"). Contemporary courts have largely rejected the proposition that antitrust doctrine should incorporate these inquiries and instead follow the lead of the so-called Chicago School of antitrust analysis, which instructs that the promotion of consumer welfare should be the sole purpose of antitrust law. *See, e.g.*, Kirtsaeng v. John Wiley & Sons, Inc., 568 U.S. 519, 539, (2013) ("[T]he principal objective of antitrust policy is to maximize consumer welfare by encouraging firms to behave competitively.") (quoting 1 P. AREEDA & H. HOVENKAMP, ANTITRUST LAW ¶ 100, p. 4 (3d ed. 2006); Leegin Creative Leather Prod., Inc. v. PSKS, Inc., 551 U.S. 877, 902 (2007) (overturning an antitrust precedent because it "hinder[ed] competition and consumer welfare"); Brooke Grp. Ltd. v. Brown & Williamson Tobacco Corp., 509 U.S. 209, 221 (1993) (noting that the "traditional concern[s]" of the antitrust laws are "consumer welfare and price competition"); Energy Conversion Devices Liquidation Tr. v. Trina Solar Ltd., 833 F.3d 680, 685 (6th Cir. 2016) ("At their core, the antitrust laws are a

EX 8

These virtues of competition are often illustrated with the stylized hypothetical of a "perfectly competitive" market with homogenous products, a large number of well-informed buyers and sellers, low entry barriers, and low transaction costs. In such a market, businesses must price their products at marginal cost to avoid losing their customers to competitors.[16] However, real-world markets almost always deviate from this textbook model of perfect competition. When one or more of the structural conditions identified above is absent, individual firms may have *market power*—the ability to profitably raise their prices above competitive levels. At the extreme, a market can be *monopolized* when a single firm possesses significant and durable market power.[17]

According to standard justifications for antitrust law, the exercise of significant market power harms consumers by requiring them to pay higher prices than they would pay in competitive markets, purchase less desirable substitutes, or go without certain goods and services altogether. Moreover, significant market power harms society as a whole by reducing output and eliminating value that would have been enjoyed in a competitive market.[18] Contemporary antitrust doctrine is focused on preventing these harms by prohibiting exclusionary conduct by dominant firms and anticompetitive mergers and acquisitions.[19] The following subsections discuss these prohibitions in turn.

Section 2 of the Sherman Act: Monopolization

Section 2 of the Sherman Antitrust Act of 1890 makes it unlawful to monopolize, attempt to monopolize, or conspire to monopolize "any part of the trade or commerce among the several States, or with foreign nations."[20] However, the statute itself does not define what it means to "monopolize" trade or commerce, leaving the courts to fill out the meaning of that concept through common law decisionmaking. Consistent with this approach, the Supreme Court's interpretation of Section 2 has evolved in response to changes in economic theory and business practice.[21]

In its monopolization case law, the Court has made clear that the possession of monopoly power and charging of monopoly prices do not by themselves constitute Section 2 violations. Instead, the Court has held that a company engages in monopolization if and only if it (1) possesses monopoly power, and (2) engages in exclusionary conduct to achieve, maintain, or enhance that power.[22]

---

consumer welfare prescription."); Fishman v. Estate of Wirtz, 807 F.2d 520, 535 (7th Cir. 1986) ("[T]he enhancement of consumer welfare is an important policy—probably the paramount policy—informing the antitrust laws.").

[18] *Id*.

[19] Federal antitrust law also prohibits various forms of anticompetitive agreements between firms. 15 U.S.C. § 1. This report focuses on antitrust law's treatment of monopolization and mergers because of their special relevance to Big Tech companies.

[20] 15 U.S.C. § 2. Although Section 2 creates three distinct offenses—monopolization, attempted monopolization, and conspiracy to monopolize—all three offenses turn on the same general concepts: monopoly power and exclusionary conduct. *See* U.S. DEP'T OF JUSTICE, SINGLE-FIRM CONDUCT UNDER SECTION 2 OF THE SHERMAN ACT 1 (2008) (report withdrawn) [hereinafter "DOJ SECTION 2 REPORT"].

[21] *See* HOVENKAMP, *supra* note 15 § 2.2a (explaining that antitrust law "has always been closely tied to prevailing economic doctrine").

[22] United States v. Grinnell Corp., 384 U.S. 563, 570-71 (1966). Section 2 is enforced by the Department of Justice, the Federal Trade Commission (pursuant to Section 5 of the Federal Trade Commission Act), state attorneys general, and private plaintiffs. *See* 15 U.S.C. §§ 4, 15a, 45; FTC v. Cement Institute, 333 U.S. 683, 694 (1948) ("[A]ll conduct

EX 9

Elements of a Monopolization Claim

To prevail in a Section 2 monopolization case, plaintiffs must show that the defendant

(1) possesses monopoly power, and

(2) engages in exclusionary conduct to achieve, maintain, or enhance that power.

Monopoly Power

To prevail in a Section 2 case, plaintiffs must show that a defendant possesses monopoly power. While the Supreme Court has explained that a firm has *market power* if it can profitably charge supra-competitive prices,[23] the Court has described *monopoly power* as "the power to control prices or exclude competition,"[24] which requires "something greater" than market power.[25] Lower federal courts have held that a firm possesses monopoly power if it possesses a *high degree* of market power.[26]

A Section 2 plaintiff can establish that a defendant possesses monopoly power in two ways. First, plaintiffs can satisfy this requirement with *direct* evidence of monopoly power—that is, evidence that the defendant charges prices significantly exceeding competitive levels.[27] However, such evidence is typically difficult to adduce because of complications in determining appropriate measures of a firm's costs, among other things.[28] As a result, plaintiffs generally attempt to establish that a defendant has monopoly power with *indirect* evidence showing that the defendant (1) possesses a large share of a relevant market, and (2) is protected by entry barriers.[29]

EX 10

Market Share

To demonstrate that a defendant possesses a dominant market share, plaintiffs must define the scope of the market in which the defendant operates. Predictably, antitrust plaintiffs typically argue that a defendant operates in a narrow market with few competitors, while defendants ordinarily contend that they operate in a broad market with many rivals. Because the size of the market in which a defendant operates (the denominator in a market-share calculation) is generally harder to determine than its sales or revenue (the numerator in such a calculation), parties in antitrust litigation often vigorously contest the issue of market definition—so much, in fact, that more antitrust cases hinge on that question than on "any other substantive issue" in competition law.[30]

Market Definition: Substitutability and the SSNIP Test. In analyzing market definition, the Supreme Court has explained that a relevant antitrust market consists of the product at issue in a given case and all other products that are "reasonably interchangeable" with it.[31] According to the Court, whether one product is "reasonably interchangeable" with another product depends on demand substitution—that is, the extent to which an increase in one product's price would cause consumers to purchase the other product instead.[32] The Court has further explained that a variety of "practical indicia" are relevant to an assessment of whether goods and services are reasonable substitutes, including

1. industry or public recognition of separate markets;
2. a product's peculiar characteristics and uses;
3. unique production facilities;
4. distinct customers;
5. distinct prices;
6. sensitivity to price changes; and
7. specialized vendors.

These criteria are sometimes called the "*Brown Shoe*" factors based on the name of the 1962 decision in which the Court identified them.[33]

In addition to the *Brown Shoe* factors, the DOJ and FTC have provided specific market-definition guidance in their Horizontal Merger Guidelines. The 2010 version of the Guidelines endorses the "hypothetical monopolist" test for defining markets, which—like the Court's case law—principally focuses on demand substitution.[34] Under this test, a group of products qualifies as a relevant antitrust market if a hypothetical monopolist selling those products would find it profitable to raise their price notwithstanding buyers' incentives to substitute other goods and services in response. Specifically, the test asks whether a hypothetical monopolist would be able to profitably impose a "small but significant and non-transitory increase in price" (SSNIP)—generally, a 5% increase.[35] If buyer substitution to other products would make such a price

EX 11

increase unprofitable, then the candidate market must be expanded until a hypothetical monopolist would benefit from such a strategy.[36]

One popular antitrust treatise illustrates the SSNIP test's application by comparing proposed markets consisting of *Ford passenger cars* and *all passenger cars*. Because Ford—which has a "monopoly" over the sale of Ford passenger cars—would likely be unable to profitably raise its prices by 5% because of the business it would lose to other car companies, *Ford passenger cars* are unlikely to qualify as a properly defined antitrust market. However, because a hypothetical firm with a monopoly over *passenger cars* likely could profit from such a price increase, *passenger cars* likely qualify as a distinct antitrust market.[37]

Market Definition and Big Tech: The Challenge of Zero-Price Markets. The SSNIP test's application to certain technology markets raises difficult issues. In a number of technology markets, firms do not charge customers for access to certain services like online search and social networking. The difficulty with applying the SSNIP test to such markets is clear: as one commentator notes, there is "no sound way" to analyze a 5% increase in a price of zero because such an increase would result in a price that *remains zero*.[38] The SSNIP test as traditionally administered is accordingly "inoperable" in a number of zero-price technology markets.[39]

Some courts and commentators have responded to this difficulty in applying the SSNIP test to zero-price markets by concluding that such markets are categorically exempt from antitrust scrutiny. In *Kinderstart.com, LLC v. Google, Inc.*, for example, a federal district court dismissed allegations that Google monopolized the market for online search on the grounds that Google does not charge customers to use its search engine.[40] Several commentators have echoed the general line of reasoning behind the *Kinderstart* decision and questioned whether the provision of free services can result in the type of consumer harm that antitrust law is intended to remedy.[41]

---

[36] A number of courts have also accepted the SSNIP test as an appropriate method for defining relevant antitrust markets. *See* FTC v. Whole Foods Mkt., Inc., 548 F.3d 1028, 1038 (D.C. Cir. 2008) ("If a small price increase would drive consumers to an alternative product, then that product must be reasonably substitutable for those in the proposed market and must therefore be part of the market, properly defined."); Theme Promotions, Inc. v. News Am. Mktg. FSI, 546 F.3d 991, 1002 (9th Cir. 2008) ("If a monopolist could not profitably impose a SSNIP, the market definition should be expanded to include those substitute products that constrain the monopolist's pricing."); United States v. Engelhard Corp., 126 F.3d 1302, 1306 (11th Cir. 1997) ("First, when determining the relevant market, the question is whether a hypothetical monopolist could profitably raise price.").

EX 12

However, others have rejected this argument and maintain that antitrust law has an important role to play in zero-price markets. Some of these commentators have argued that zero-price transactions are not in fact "free" to consumers, and that consumers ultimately "pay" for putatively "free" goods and services with both their attention and personal data.[42] According to this line of argument, many of these consumers may actually be *overpaying*. That is, some observers have argued that certain "free" products and services may have *negative* equilibrium prices under competitive conditions, meaning that firms in the relevant markets would *pay consumers* for their attention and the use of their data if faced with sufficiently robust competition.[43]

Other commentators have argued that firms offering zero-price products and services can compete on a variety of nonprice dimensions such as quality and privacy, and that antitrust law can promote consumer welfare in zero-price markets by ensuring that companies engage in these types of nonprice competition.[44] This argument appears to have persuaded regulators at the DOJ. In a February 2019 speech, Makan Delrahim—the head of the Justice Department's Antitrust Division—contended that antitrust law applies "in full" to zero-price markets because firms offering "free" products and services compete on a variety of dimensions other than price.[45]

While many observers accordingly agree that zero-price markets are not categorically immune from antitrust scrutiny, the optimal approach to defining the scope of such markets remains open to debate. Some commentators have argued that regulators should modify the SSNIP test to account for *quality-adjusted* prices, creating a new methodology called the "small but significant and non-transitory decrease in quality" (SSNDQ) test. According to these academics, decreases in the quality of "free" services (e.g., a decline in the privacy protections offered by a social network) are tantamount to increases in the quality-adjusted prices of those services. Under the SSNDQ test, then, a firm offering "free" goods or services would possess monopoly power if it had the ability to profitably raise its quality-adjusted prices significantly above competitive levels.[46]

In contrast, other analysts have proposed that courts and regulators evaluate the scope of zero-price markets by engaging in *qualitative* assessments of the degree to which various digital

products and services are "reasonably interchangeable." For example, in a 2019 European Commission report on digital competition, a group of commentators proposed a "characteristics-based" approach to market definition for zero-price industries under which regulators would compare the functions of relevant digital services.[47]

This type of qualitative method for defining relevant product markets has some support in U.S. antitrust doctrine. As discussed, under *Brown Shoe*'s "practical indicia" approach, a product's "peculiar characteristics and uses" are relevant factors in determining the appropriate scope of an antitrust market.[48] While lower courts have described such informal methods as "old school" in light of the sophisticated econometric evidence typically produced in contemporary antitrust litigation,[49] they have also recognized that *Brown Shoe* remains good law and have employed its "practical indicia" approach despite its somewhat anachronistic status.[50] As a result, regulators may engage in qualitative comparisons of the functions of various digital services in assessing the scope of certain zero-price markets. Regulators could plausibly supplement such inquiries with surveys or other empirical evidence evaluating which products consumers regard as "reasonably interchangeable" with the product at issue in a given case.[51]

Finally, a number of courts employing the *Brown Shoe* criteria have emphasized "industry recognition" of the scope of certain markets. Specifically, these courts have relied on corporate conduct, internal strategy documents, and expert testimony to determine the types of companies that a defendant regards as competitors.[52] Accordingly, courts and regulators may be able to rely on these types of qualitative evidence to determine the scope of certain zero-price digital markets.

Market Shares: How Much Is Enough? Once a Section 2 plaintiff has defined a relevant antitrust market, it must show that the defendant occupies a dominant share of that market. Courts have recognized that there is no fixed market-share figure that conclusively establishes that a defendant-company has monopoly power.[53] However, the Supreme Court has never held that a party with *less* than 75% market share has monopoly power.[54]

Lower court decisions provide a number of other useful data points. In the U.S. Court of Appeals for the Second Circuit's influential decision in *United States v. Aluminum Co. of America*, Judge Learned Hand reasoned that (1) a 90% market share can be sufficient to establish a prima facie case of monopoly power, (2) a 60% or 64% share is unlikely to be sufficient, and (3) a 33% share

EX 14

is "certainly" insufficient.[55] Similarly, the Tenth Circuit has explained that courts generally require a market share between 70% and 80% to establish monopoly power.[56] And the Third Circuit has reasoned that a defendant's market share must be "significantly larger" than 55%, while holding that a share between 75% and 80% is "more than adequate" to establish a prima facie case of monopoly power.[57]

Entry Barriers

Several courts have held that proof that a defendant occupies a large market share is insufficient on its own to establish that the defendant has monopoly power.[58] Instead, these courts have concluded that a defendant must also be insulated from potential competitors by significant entry barriers to possess the type of *durable* monopoly power necessary for a Section 2 case.[59] Courts and commentators generally use the concept of entry barriers to refer to long-run costs facing new entrants but not incumbent firms, including (1) legal and regulatory requirements, (2) control of an "essential or superior resource," (3) "entrenched buyer preferences for established brands," (4) "capital market evaluations imposing higher capital costs on new entrants," and (5) in certain circumstances, economies of scale.[60]

The significance of any entry barriers shielding Big Tech companies is a fact-intensive question that will depend on the specific evidence that the DOJ and FTC uncover. However, commentators have identified a number of plausible entry barriers in certain digital markets, including:

- ***Network Effects.*** A digital platform benefits from network effects when its value to customers increases as more people use it. A platform exhibits "direct" or "same-side" network effects when its value to users on one side of the market increases as the number of users on that side of the market increases.[61] Social networks arguably exhibit this category of network effects because their value to

EX 15

users is dependent on the number of other users that they are able to attract.[62] In contrast, a platform exhibits "indirect" or "cross-side" network effects when its value to users on one side of the market increases as the number of users on *the other side* of the market increases.[63] Search engines arguably benefit from indirect network effects because they become more valuable to advertisers as they attract additional users who can be targeted with ads. Some courts and commentators have concluded that both categories of network effects represent entry barriers that make it difficult for small firms to meaningfully compete with larger incumbents in certain digital markets.[64]

- ***The Advantages of Big Data.*** A number of commentators have argued that the significant volume of user data generated by certain digital platforms confers important advantages on established companies.[65] According to this theory, large firms with access to significant amounts of data can use that data to improve the quality of their products and services (e.g., by increasing the accuracy of a search engine, improving targeted advertising, or offering targeted discounts)—a process that attracts additional customers, who in turn generate more data.[66] Some commentators have accordingly argued that access to "big data" can result in a feedback loop that reinforces the dominance of large firms.[67]
- ***Costs of Switching and Multi-Homing.*** Some commentators have argued that consumers in certain digital markets are unlikely to switch from one platform to another or use multiple platforms simultaneously—a phenomenon that advantages large established companies.[68] These "lock-in" effects can have a variety of causes. A digital platform's customers may be dissuaded from switching to another platform by the prospect of losing their photos, contacts, search history, apps, or other personal data.[69] To similar effect, technology companies may "tie" various products or services together through contractual requirements or technical impediments that prevent customers from

EX 16

> simultaneously using competing products or services.[70] Finally, some consumers may exhibit behavioral biases that render their initial choice of a platform "sticky," making them unlikely to switch platforms even when presented with superior alternatives.[71] All of these factors can create a powerful "first-mover advantage" for incumbent firms that deters potential competitors.[72]

In contrast, others have questioned whether digital markets exhibit significant entry barriers. For example, Google has repeatedly denied the claim that it is insulated from rivals, arguing that consumers incur low costs in switching to alternative search engines because competition is only "one click away."[73] Similarly, other commentators have argued that the history of upstart rivals supplanting once-dominant technology companies suggests that any monopoly power in dynamic technology markets is unlikely to be durable.[74]

Exclusionary Conduct

In addition to establishing that a defendant possesses monopoly power, Section 2 plaintiffs must demonstrate that the defendant engaged in exclusionary conduct to achieve, maintain, or enhance that power.[75] While the Supreme Court has developed tests for evaluating whether specific categories of behavior qualify as prohibited exclusionary conduct, it has not endorsed a general standard for distinguishing such conduct from permissible commercial activities.[76] However, courts have made clear that exclusionary conduct must involve harm to the *competitive process* and not simply harm to a defendant's *competitors*.[77] The following subsections discuss how courts have evaluated specific categories of behavior under Section 2.

Predatory Pricing

A monopolist can violate Section 2 by pricing its products below cost to eliminate competitors—a practice commonly known as "predatory pricing."[78] However, because price cutting ordinarily

EX 17

benefits consumers, the Supreme Court has "carefully limited" the circumstances in which charging low prices qualifies as impermissible exclusionary conduct. Specifically, under the so-called *Brooke Group* test, a plaintiff bringing predatory-pricing claims must show that a monopolist (1) priced the relevant product below an appropriate measure of cost, and (2) had a "dangerous probability" of recouping its losses by raising prices upon the elimination of its competitors.[79] The Court has defended *Brooke Group*'s safe harbor for above-cost pricing on the grounds that courts cannot identify anticompetitive above-cost prices without chilling legitimate price competition.[80] Similarly, the Court has explained that a "dangerous probability" of recoupment is necessary to state a predatory-pricing claim because without recoupment, low prices enhance consumer welfare.[81]

Some commentators have suggested that there may be cognizable affirmative defenses to predatory-pricing allegations even when the two *Brooke Group* requirements are satisfied. Specifically, firms accused of predatory pricing may be able to defend such charges on the grounds that certain below-cost pricing practices are procompetitive. For example, in a DOJ lawsuit targeting collusion in the e-book industry, regulators explained their decision not to pursue predatory-pricing charges against Amazon on the grounds that the company charged below-cost prices for certain categories of e-books because it intended those books to be "loss leaders."[82] Unlike a firm that engages in predatory pricing—which charges below-cost prices for certain products with an eye towards recouping its losses by charging monopoly prices for those products upon the elimination of competitors—a firm that sells a loss-leader charges below-cost prices to induce consumers to purchase *other* goods or services at above-cost prices.[83] Similarly, some commentators have suggested that below-cost prices that are intended to be promotional in nature or develop the type of user base necessary to realize network effects should not be condemned under Section 2.[84]

The application of predatory-pricing doctrine to Big Tech markets is discussed in greater detail in "Amazon" *infra*.

Refusals to Deal and Essential Facilities

Refusals to Deal. The Supreme Court has explained that companies are generally free to choose their business partners and counterparties.[85] However, the Court has held that Section 2 requires monopolists to do business with their rivals in certain limited circumstances.[86] In its key modern refusal-to-deal decision, *Aspen Skiing Co. v. Aspen Highlands Skiing Co.*, the Court affirmed a

EX 18

jury verdict holding a dominant ski-service operator liable under Section 2 for refusing to do business with a competitor.[87] The defendant in *Aspen Skiing*—a ski-service operator that owned three of the four mountains in a popular skiing area—terminated a joint venture with the owner of the fourth mountain under which the companies offered a combined four-mountain ski pass.[88] The defendant also refused to sell its daily ski tickets to the competitor to prevent the competitor from creating an alternative ticket package that functionally replicated the previous offering.[89] In affirming the verdict finding the dominant ski operator liable under Section 2, the Court explained that the jury could have reasonably concluded that the defendant elected to forgo short-term benefits from the joint venture and ticket sales to eliminate its rival from the market. According to the Court, this conclusion was reasonable because the defendant had (1) ceased what was presumably a profitable course of dealing, (2) refused to sell its tickets to the competitor at prevailing retail prices, and (3) failed to offer a plausible efficiency-based justification for its conduct.[90]

However, the Court has subsequently construed *Aspen Skiing* narrowly. In *Verizon Communications, Inc. v. Law Offices of Curtis V. Trinko, LLP*, the Court rejected the argument that Section 2 required a monopolist in the market for wholesale local telephone service to offer adequate interconnection services to its downstream rivals in the market for retail phone service.[91] In reaching this conclusion, the Court characterized its previous decision in *Aspen Skiing* as "at or near the outer boundary" of Section 2 liability.[92] The Court then distinguished that case on the grounds that unlike the dominant ski-service operator in *Aspen Skiing*, the wholesale telephone-service monopolist had not ceased a previous course of dealing with its competitors.[93] The Court also observed that unlike the defendant in *Aspen Skiing*, the monopolist in *Trinko* did not refuse to sell its competitors a product that it offered to the public—another factor that can suggest an anticompetitive intent to forgo short-term profits to eliminate rivals.[94] In the absence of these factors, the Court explained, Section 2 did not require the telephone monopolist to do business with its competitors.

Essential Facilities. A number of lower courts have recognized a subset of cases in which monopolists have a duty to deal with rivals under what has been called the "essential-facilities" doctrine.[95] In developing this doctrine, lower courts have relied principally on the Supreme Court's decisions in *United States v. Terminal Railroad Association of St. Louis*[96] and *Otter Tail Power Co. v. United States*.[97] In *Terminal Railroad Association of St. Louis*, the Court held that a

EX 19

consortium of railroads that controlled the facilities necessary to carry traffic across the Mississippi River in St. Louis violated Section 2 by refusing to grant other railroads access to those facilities.[98] Similarly, in *Otter Tail Power Co.*, the Court held that a vertically integrated power company violated Section 2 by refusing to transmit wholesale power to municipalities seeking to operate their own retail distribution systems.[99]

According to the leading formulation of the essential-facilities doctrine that has been derived from these decisions, a plaintiff bringing an essential-facilities claim must show that (1) a monopolist controls access to an "essential" facility, (2) competitors cannot "practically or reasonably" duplicate that facility, (3) the monopolist has denied access to the facility to a competitor, and (4) the monopolist can feasibly share access to the facility.[100]

In applying this test, courts have held that a facility need not be "indispensable" to qualify as "essential." Rather, essential-facilities plaintiffs need only establish that duplication of the facility would be "economically infeasible," and that the denial of its use "inflicts a severe handicap on potential market entrants."[101] However, plaintiffs must show more than mere "inconvenience" to prevail on an essential-facilities cause of action,[102] and courts have accordingly rejected Section 2 claims when plaintiffs had reasonable alternatives to the relevant facility.[103] In assessing the third element of the essential-facilities test—which asks whether a dominant firm has denied access to an essential facility—courts have held that although monopolists need not allow competitors "absolute equality of access,"[104] an offer to deal with competitors "only on unreasonable terms and conditions" may violate Section 2 by amounting to "a practical refusal to deal."[105] Finally, in assessing the "feasibility" requirement for essential-facilities claims, several courts have held that the viability of sharing an essential facility must be assessed in the context of a company's "normal business operations," and that monopolists accordingly need not share such facilities if they can identify "legitimate business reasons" for refusing access.[106]

EX 20

The application of the refusal-to-deal and essential-facilities doctrines to specific Big Tech companies is discussed in greater detail in "Google Search: Refusals to Deal and Essential Facilities" and "Amazon" *infra*.

Tying and Exclusionary Product Design

In certain circumstances, "tying" separate products together—that is, selling one product (the "tying" product) on the condition that buyers also purchase another product (the "tied" product)—can violate Section 2.[107] Firms can tie products together in a variety of ways. In a "bundled tie," a company simultaneously sells two or more products, one of which it does not sell separately. In contrast, "contractual ties" often involve a requirement that a buyer purchase different products at different times. And firms engage in "technological ties" when they physically integrate different products that are not sold separately or design their products in a way that makes them incompatible with products offered by other firms.[108]

According to the Supreme Court, certain tying arrangements can harm competition by allowing a firm with monopoly power in the market for the tying product to extend its dominance into the market for the tied product.[109] Some commentators have also argued that tying arrangements can allow a monopolist to maintain its monopoly in the tying-product market by requiring potential rivals to enter both that market and the market for the tied product, which can act as a formidable entry barrier.[110]

Under contemporary tying doctrine, a plaintiff can establish that a defendant engaged in *per se* illegal tying if it can demonstrate (1) the existence of two separate products, (2) that the defendant conditioned the sale of one product on the purchase the other product, (3) that the arrangement affects a "substantial volume" of interstate commerce, and (4) that the defendant has market power in the market for the tying product.[111] However, plaintiffs can also prevail on tying claims even if they cannot make these showings. When one or more of these conditions is absent, courts evaluate tying claims under a totality-of-the-circumstances approach known as the Rule of Reason. Under this three-step burden-shifting framework, the plaintiff bears the initial burden of establishing that a challenged tying arrangement harms competition. If the plaintiff makes this

---

at 544-45. While a number of lower courts have recognized the essential-facilities doctrine and applied the general principles discussed above, the Supreme Court's decision in *Trinko* limited its scope. In *Trinko*, the Court asserted that it had never recognized the essential-facilities doctrine, which it instead characterized as having been "crafted by some lower courts." Verizon Commc'ns Inc. v. Law Offices of Curtis V. Trinko, LLP, 540 U.S. 398, 410-11 (2004). The Court then explained that it did not need to endorse or repudiate the doctrine in *Trinko* because an essential-facilities claim would fail on the facts of that case. Specifically, the Court held that such a claim would fail because the allegedly essential facility—adequate interconnection services for retail local telephone service—was separately regulated by a federal agency with the power "to compel sharing and to regulate its scope and terms," meaning that the facilities were not truly "unavailable" to competitors. *Id*. at 411 (quoting PHILLIP AREEDA & HERBERT HOVENKAMP, ANTITRUST LAW ¶ 773e, at 150 (2003 Supp.)).

[107] Four provisions of the antitrust laws prohibit certain forms of tying: Sections 1 and 2 of the Sherman Act, Section 3 of the Clayton Act, and Section 5 of the Federal Trade Commission Act. 15 U.S.C. §§ 1, 2, 14, 45(a)(1). However, the standards for evaluating tying arrangements under these provisions have largely converged. *See* DOJ SECTION 2 REPORT, *supra* note 20, at 77.

EX 21

showing, the burden shifts to the defendant to rebut the plaintiff's case with evidence that the challenged tying arrangement has procompetitive benefits. And if the defendant succeeds in rebutting the plaintiff's prima facie case, the factfinder must weigh the procompetitive benefits of a challenged tying arrangement against its anticompetitive harms.[112]

In addition to these general principles of tying doctrine, lower courts have developed a separate body of case law concerning technological ties—a category of conduct that is sometimes described as "exclusionary product design." The standard exclusionary-design claim alleges that a monopolist changed a product's design in a way that makes the product difficult or impossible to use with complementary products sold by other firms, thereby extending its dominance into the market for the complementary products in a manner that is broadly similar to the effects of other sorts of tying arrangements. One commentator has described the case law on exclusionary design as "somewhat tangled," but certain broad principles can be distilled from the relevant decisions.[113]

Generally courts are "very skeptical" about exclusionary-design claims out of fear that expansive liability for design decisions will chill innovation.[114] In *California Computer Products v. IBM Corp.*, for example, the Ninth Circuit rejected claims that a dominant computer manufacturer violated Section 2 by introducing a new line of computers that were integrated with certain "peripherals" (e.g., disks and memory devices) and incompatible with peripherals sold by other companies.[115] The court rejected this argument on the grounds that the manufacturer's integration of the peripherals lowered its costs and improved the computers' performance.[116] The Second Circuit adopted a standard that is even more deferential toward exclusionary-design defendants in *Berkey Photo, Inc. v. Eastman Kodak Co.*, where it held that a dominant camera manufacturer had not violated Section 2 by launching a new camera and film that were incompatible with products sold by a rival.[117] In that decision, the court held that the defendant had not engaged in exclusionary conduct even when faced with conflicting evidence as to whether the new camera was superior to previous versions. In the face of this evidence, the court opted to defer to market forces, explaining that consumers should be left to determine whether they preferred the new product.[118]

However, the D.C. Circuit's landmark 2001 decision in *United States v. Microsoft Corp.* marked a departure from previous exclusionary-design cases.[119] In that case, the court evaluated Microsoft's integration of its internet-browser software (Internet Explorer) with its dominant personal-computer operating system (Windows OS). Microsoft had effectuated this integration in three ways: by (1) excluding Internet Explorer programs from Windows OS's "Add/Remove Programs" function, (2) programming Windows to sometimes override users' choice to set browsers other than Internet Explorer as their default browsers, and (3) commingling Internet Explorer's code with Windows code so that any attempt to delete Internet Explorer would cripple the operating system.[120] The government alleged that this conduct harmed competition in the

EX 22

market for internet browsers by deterring consumers from using browsers other than Internet Explorer.

In evaluating Microsoft's product design, the D.C. Circuit employed the Rule of Reason. At the first step of that inquiry, the court concluded that the government had made a prima facie case that each of the challenged practices harmed competition in the market for internet browsers, shifting the burden to Microsoft to identify procompetitive justifications for its actions.[121] The D.C. Circuit proceeded to conclude that Microsoft successfully rebutted the government's case against the second category of challenged conduct—programming Windows to sometimes override default browser choices—because the company proffered valid technical reasons for its programming decisions. However, the court held that because Microsoft failed to establish that the remaining categories of conduct had procompetitive benefits, that conduct violated Section 2.[122]

In contrast, some post-*Microsoft* decisions from other federal circuits have been more favorable to exclusionary-design defendants. In *Allied Orthopedic Appliances, Inc. v. Tyco Health Care Group LP*, the Ninth Circuit eliminated the third step of the Rule-of-Reason test and refused to "balance" a challenged design's procompetitive benefits against its anticompetitive harms.[123] Instead, the court rejected exclusionary-design claims on the grounds that it was "undisputed" that the new product had improved upon previous versions in certain respects.[124] In such cases, the court explained, a monopolist's design change is "necessarily tolerated by the antitrust laws" irrespective of its anticompetitive effects.[125] The lower federal courts are accordingly split on the proper analytical approach to exclusionary-design claims.

The application of tying and exclusionary-design doctrine to specific Big Tech companies is discussed in greater detail in "Android: Tying and Exclusive Dealing" and "Apple" *infra*.

Exclusive Dealing

In certain circumstances, a monopolist can violate Section 2 by entering into "exclusive-dealing" agreements with its customers or suppliers—that is, agreements in which a buyer agrees to purchase certain goods or services only from the monopolist or a seller agrees to sell certain goods and services only to the monopolist for a certain time period. Such agreements can be anticompetitive when they allow a monopolist to harm competition by "foreclosing" potential sources of supply or distribution.[126] For example, if a dominant widget manufacturer enters into exclusive-dealing arrangements with a significant number of large widget retailers, other widget manufacturers may be unable to secure an adequate distribution network. However, exclusive-dealing arrangements can also be procompetitive. For example, some exclusive-dealing agreements allow manufacturers to overcome free-rider problems by enabling them to train their distributors without fearing that the distributors will use that training to sell rival products.[127] In

EX 23

other cases, exclusive-dealing arrangements may serve the procompetitive objective of allowing a company to guarantee a secure source of supply or distribution.[128]

Lower federal courts evaluate exclusive-dealing agreements under the Rule of Reason and accordingly weigh their anticompetitive harms against their procompetitive benefits. In conducting this analysis, courts have required plaintiffs to demonstrate that a challenged exclusivity provision resulted in "substantial foreclosure" of supply or distribution.[129] The exclusive-dealing case law does not provide definitive guidance on the degree of foreclosure that qualifies as "substantial," as courts have varied considerably in the degree of foreclosure that they consider unlawful.[130] However, an author of the leading antitrust treatise has argued that single-firm foreclosure of less than 30% is unlikely to harm competition.[131] In addition to requiring that plaintiffs demonstrate substantial foreclosure, courts have evaluated a range of other factors in exclusive-dealing cases, including the duration of specific exclusivity provisions, the strength of the defendant's procompetitive justification for the provisions, whether the defendant has engaged in coercive behavior, and the use of exclusive-dealing agreements by the defendant's competitors.[132]

The application of exclusive-dealing doctrine to Big Tech markets is discussed in greater detail in "Android: Tying and Exclusive Dealing" and "Google AdSense: Exclusive Dealing" *infra*.

Section 7 of the Clayton Act: Mergers and Acquisitions

While Section 2 of the Sherman Act is concerned with unilateral exclusionary conduct, Section 7 of the Clayton Antitrust Act of 1914 prohibits mergers and acquisitions that may "substantially lessen" competition.[133] Section 7 applies to both "horizontal" mergers between competitors in the same market and "vertical" mergers between companies at different levels of a distribution chain.[134] In evaluating horizontal mergers, the DOJ and FTC typically evaluate the merged firm's market share and the resulting level of concentration in the relevant market, in addition to any efficiencies that the combined company will likely realize as a result of the proposed merger.[135]

In contrast, vertical mergers may raise competition concerns when they involve a firm with significant power in one market entering an adjacent market, which may foreclose potential sources of supply or distribution and raise entry barriers by requiring the firm's potential competitors to enter both markets to be competitive. For example, if a dominant widget manufacturer acquires a widget retailer, it may have incentives to discriminate against competing widget retailers by charging them higher prices or refusing to deal with them altogether. As a

result of this vertical discrimination, such a merger may force prospective widget retailers to also enter widget manufacturing to be competitive, raising entry barriers in the retail market.[136] Despite these potential concerns with certain vertical mergers, the DOJ and FTC police such mergers far less aggressively than horizontal mergers, largely on the basis of academic work suggesting that vertical integration can result in significant efficiencies and only rarely threatens competition.[137] However, whether the antitrust agencies should scrutinize vertical mergers more closely remains a subject of ongoing debate.[138]

The DOJ and FTC apply Section 7 by reviewing large proposed mergers before they are finalized, though the agencies also have the authority to unwind consummated mergers. Under the Hart-Scott-Rodino Antitrust Improvements Act of 1976 (the HSR Act), parties to certain large mergers and acquisitions must report their proposed transactions to the antitrust agencies and wait for approval before closing.[139] If the agencies determine that a proposed merger threatens to "substantially lessen" competition, they can sue to block the merger or negotiate conditions with the companies to safeguard competition.[140] Section 7 of the Clayton Act also gives the agencies the authority to challenge previously closed mergers that "substantially lessen" competition, though lawsuits to unwind consummated mergers have been "rare" since the enactment of the HSR Act.[141]

The application of Section 7 to Big Tech markets is discussed in greater detail in "Facebook" *infra*.

Antitrust and Big Tech: Possible Cases Against the Big Four

Applying the general legal principles discussed above to specific technology companies is a highly fact-intensive enterprise that will depend on the specific evidence that the DOJ and FTC uncover during their investigations.[142] Moreover, the agencies have yet to publicly release details on the categories of conduct that they are evaluating in the course of their Big Tech inquiries, making it difficult to confidently assess the strength of antitrust cases against the relevant companies. With these caveats in mind, the following subsections discuss certain categories of conduct that the antitrust agencies may be investigating at each of the Big Four.

Google

Google is no stranger to antitrust scrutiny. The technology giant—which runs Google Search, licenses the Android mobile operating system, and owns a major online ad-brokering platform (AdSense)—has found itself in the crosshairs of competition authorities several times over the past decade. In 2013, the FTC concluded a wide-ranging investigation into the company's business practices, including its alleged discrimination against vertical rivals, copying of content from other websites, restrictions on advertisers' ability to do business with competing search engines, and exclusivity agreements with websites that used AdSense.[143] While agency staff had recommended that the FTC bring a lawsuit challenging some of these activities,[144] the Commission unanimously declined to pursue such an action after Google committed to make certain changes to its business practices.[145]

In contrast, European antitrust authorities have pursued three separate investigations of Google that have each resulted in large fines.[146] In June 2017, the European Commission (EC) fined Google 2.4 billion euros for antitrust violations related to Google Search's preferential treatment of the company's comparison-shopping service, Google Shopping.[147] The EC later levied an additional 4.3 billion-euro penalty in July 2018 for tying and exclusive-dealing arrangements related to Android.[148] And in March 2019, the EC imposed a further 1.49 billion-euro penalty for exclusive- and restrictive-dealing agreements involving AdSense.[149]

While the focus of the DOJ's inquiry into Google's conduct remains somewhat obscure, the investigation is likely to implicate some of the same practices that have occupied the attention of European antitrust authorities. The subsections below discuss these issues in turn.

Google Search: Refusals to Deal and Essential Facilities

Google Search's allegedly preferential treatment of Google content has long been the subject of government investigations and academic discussion. The basic concern of these "search bias" allegations is the familiar worry about vertically integrated monopolists harming competition by discriminating against rivals who depend on a monopolized input or distribution channel. According to some critics, Google Search has monopoly power in the market for *general-purpose*

EX 26

("horizontal") online search—power that Google has used to harm competition in the markets for various forms of *specialized* ("vertical") search by privileging its own vertical properties over those of its downstream competitors.[150]

The FTC evaluated these "search bias" complaints during its 2011-2013 investigation, which examined whether Google unfairly promoted its own vertical properties like Google Maps, Google Local, and Google Trips over competitors like MapQuest, Yelp, and Expedia.[151] Specifically, these complaints alleged that Google Search privileged Google's vertical content by (1) introducing a "Universal Search" box that prominently displayed that content above rival websites, and (2) manipulating its search algorithms to demote vertical competitors in its search results. However, the FTC ultimately declined to pursue a lawsuit related to these practices after concluding that Google's "primary goal" in privileging its own content was to quickly answer users' search queries and improve the quality of its search results.[152] In contrast, the EC concluded in June 2017 that Google's preferential treatment of Google Shopping violated EU antitrust law by harming competition in the market for comparison-shopping services.[153]

If the DOJ were to reevaluate Google's alleged search bias, it would face the threshold question of whether Google in fact possesses monopoly power in the market for horizontal search. During the FTC's previous investigation, agency staff concluded that horizontal search "likely" constituted a properly defined antitrust market and that Google had monopoly power in that market in light of its 71% market share.[154] More recent estimates place Google's share of the horizontal search-engine market even higher.[155] Moreover, certain academic reports on digital competition suggest that Google Search may be protected by significant entry barriers in the form of high fixed costs and access to the "big data" necessary to develop accurate search algorithms.[156]

However, several commentators have disputed the proposition that Google Search has monopoly power. Some of these observers have argued that the relevant market in an antitrust lawsuit based on Google's alleged "search bias" would be larger than the market for horizontal search, because users of horizontal search engines have reasonable alternatives to obtain information on the internet, including websites like Facebook, Twitter, and Amazon.[157] Some skeptics have also argued that even if horizontal search is a properly defined antitrust market, Google's large share of that market does not necessarily give it monopoly power. According to these commentators, the low costs that consumers incur in switching to alternative search engines and the ability of

EX 27

those competing search engines to immediately increase "output" cast doubt on the claim that Google has monopoly power.[158]

If the DOJ could establish that Google has monopoly power, it would then need to show that Google's allegedly preferential treatment of its vertical properties represents an anticompetitive abuse of that power.[159] Such a showing may be difficult under existing monopolization doctrine. In *Aspen Skiing*, the Supreme Court held that a monopolist's refusal to deal with a competitor can violate Section 2 where the evidence suggests that the refusal was motivated by a desire to sacrifice short-term profits in order to eliminate the competitor from the market.[160] In that case, the Court held that a jury could have reasonably found such a desire because the defendant had terminated what was presumably a profitable course of dealing with its rival and refused to sell its daily ski tickets to the rival at prevailing retail prices.[161] However, in *Trinko*, the Court narrowly construed *Aspen Skiing*, describing it as "at or near the outer boundary" of Section 2 liability.[162] The *Trinko* Court proceeded to reject refusal-to-deal claims because the defendant in that case had not ceased a previous course of dealing or refused to sell its competitors a product that it sold to the public.[163]

The Court's decision in *Trinko* makes a refusal-to-deal case against Google difficult for several reasons. First, Google did not have previous courses of dealing with the websites that received high placement in its search results before the company implemented its allegedly discriminatory policies. While Google's search algorithm ranked these websites highly before this alleged discrimination, the websites did not pay Google for their high placement. Moreover, even if Google's relationships with these websites qualify as established courses of dealing, it is unlikely that Google's termination of those dealings involved a sacrifice of short-term profits that the company intends to recoup with long-term monopoly prices. Instead, Google's decision to give its own content premium placement likely maximizes the company's short-term profits by generating more user clicks, even if such actions also harm its vertical competitors. As a result, the factors that *Trinko* appears to have identified as necessary conditions for a refusal-to-deal claim would likely be absent in a case challenging Google's alleged search bias.[164]

A lawsuit challenging Google's vertical discrimination would also face difficulties under the essential-facilities doctrine. First, it is unclear whether high placement in Google's search results represents an "essential" facility. One court has held that a facility can qualify as "essential" when the denial of its use "inflicts a severe handicap on potential market entrants."[165] However, plaintiffs must show more than mere "inconvenience" in order to prevail on an essential-facilities cause of action,[166] and courts have accordingly rejected Section 2 claims when plaintiffs had reasonable alternatives to the relevant facility.[167] While premium placement in Google's search

EX 28

results was likely an important benefit for some of Google's vertical rivals, it is uncertain whether such placement would qualify as "essential" under these standards given the other ways in which vertical search engines can reach potential customers. Moreover, it is unlikely that a plaintiff could demonstrate that Google can "feasibly" share this allegedly essential facility. As one commentator has argued, only one website can receive the highest ranking in Google's search results,[168] meaning that Google cannot give top placement to its own vertical properties *and* their competitors.[169] Finally, Google may be able to identify legitimate business reasons for giving its own content premium placement. After its 2011-2013 investigation of Google's search bias, the FTC declined to pursue a lawsuit on the grounds that the company's use of the "Universal Search" box and privileging of its own content were motivated by a desire to quickly answer users' search queries.[170] Google is therefore likely to rely on similar arguments in any actions challenging its search practices.

Android: Tying and Exclusive Dealing

In addition to evaluating Google's alleged search bias, the DOJ may follow the lead of European antitrust authorities in investigating the company's practices involving its Android mobile operating system. In a July 2018 press release announcing a record-setting antitrust fine, the EC concluded that Google occupied a dominant position in three markets related to the Commission's Android investigation. First, the EC concluded that Google occupied a dominant position in the market for "general licensable smart mobile operating systems" through Android. Second, the EC determined that Google occupied a dominant position in the market for "app stores for the Android operating system" through its app store Google Play. Finally, the EC concluded that Google occupied a dominant position in the market for "general Internet search" through Google Search.[171] After identifying these markets in which Google is dominant, the EC determined that Google had abused its monopoly positions by engaging in three separate categories of behavior:

- *First*, the EC concluded that Google illegally "tied" the Google Search app and Google Chrome web browser to the Google Play store. Specifically, the EC determined that Google harmed competition in the online-search market by requiring mobile device manufacturers who pre-install Google Play to also pre-install Google Search and Google Chrome (which uses Google Search as its default search engine). According to the EC, this type of mandated pre-installation can create a "status quo bias" that discourages consumers from downloading competing search engines and web browsers.

company that also published leading bodybuilding magazines did not have a duty to publish advertisements for a competing supplement company because the competing company had alternative advertising options); City of Malden, Mo. v. Union Elec. Co., 887 F.2d 157, 162 (8th Cir. 1989) (holding that sufficient evidence supported a jury's determination that a city—which had brought an essential-facilities claim against a utility that refused to transmit power to it under favorable tariff rates—had reasonable alternatives to the utility's transmission line).

EX 29

- *Second*, the EC concluded that Google made illegal payments to certain large device manufacturers in exchange for their agreement to *exclusively* pre-install Google Search on all of their Android devices.
- *Third*, the EC concluded that Google illegally obstructed the development and distribution of competing Android operating systems by requiring that device manufacturers who pre-install Google Play and Google Search refrain from selling any devices that ran alternative versions of Android that Google had not approved ("Android forks").[172]

Google is currently appealing the EC's decision.[173]

Tying. A DOJ lawsuit targeting Google's "tying" of Google Search and Google Chrome to Google Play would raise a number of complex issues. First, a court evaluating such a lawsuit would have to determine whether this conduct is *per se* illegal or instead subject to Rule-of-Reason scrutiny. As discussed, plaintiffs can establish a *per se* tying violation by demonstrating (1) the existence of two separate products, (2) that the defendant conditioned the sale of one product on the purchase the other product, (3) that the arrangement affects a "substantial volume" of interstate commerce, and (4) that the defendant has market power in the market for the tying product.[174] However, courts have applied these requirements narrowly,[175] and the D.C. Circuit held in *Microsoft* that the unique features of software platforms makes *per se* liability inappropriate for ties involving such platforms and related products.[176]

The general trend away from *per se* tying liability and the D.C. Circuit's *Microsoft* decision suggest that a court would likely evaluate Google's tying arrangements under the Rule of Reason. As an initial matter, it is unclear whether mandatory *pre-installation* of the relevant apps represents the type of "forced sale" necessary to trigger *per se* liability under the relevant case law. During its Android enforcement action, the EC contended that mandatory pre-installation had significant effects on consumer behavior by discouraging Android users from downloading alternative search engines and web browsers.[177] However, this allegation is an empirical claim about a relatively novel business practice, and the Supreme Court has explained that *per se* antitrust liability is appropriate only when courts have sufficient experience with a challenged practice to conclude that it lacks significant redeeming virtues.[178] Limited judicial experience with the effects of mandatory pre-installation (as opposed to conditional *sales*) may accordingly counsel against *per se* liability for Google's Android ties.

Moreover, this hesitance to extend *per se* antitrust rules to novel business arrangements caused the D.C. Circuit to conclude in *Microsoft* that ties involving software-platform products are

subject to Rule-of-Reason scrutiny.[179] While Google's Android ties differ from the ties at issue in *Microsoft* in certain respects, commentators have observed that a tying case against Google would raise issues that are "very similar" to those the D.C. Circuit confronted roughly two decades ago.[180] As a result, a court evaluating Google's tying of Google Search and Google Chrome to Google Play may follow the D.C. Circuit and evaluate such conduct under the Rule of Reason.

In balancing the anticompetitive harms of these ties against their procompetitive benefits under the Rule of Reason, courts will likely focus on the general concern that motivated the EC's enforcement action—namely, the worry that Android users who find Google Search and Google Chrome pre-installed on their devices are unlikely to download and use alternative search engines. The magnitude of this concern is a fact-intensive question that will depend on the specific evidence concerning the effects of pre-installation that the DOJ can uncover.

If the DOJ produces evidence that Google's tying arrangements harm competition, a Section 2 case will depend on the strength of the company's procompetitive justifications for these practices. During the EC litigation, Google argued that the relevant ties ultimately benefitted consumers because the revenue the company derived from increased use of Google Search by Android users allowed it to license Android to device makers for free. However, the EC rejected this claim and concluded that Google can monetize its investment in Android by other means.[181]

U.S. regulators and courts have the benefit of additional information on this issue. After the EC's decision, Google announced that instead of offering a suite of apps to device makers for free, it will charge manufacturers licensing fees for Google Play and certain other apps to make up for the revenue it previously earned as a result of the challenged tying arrangements.[182] Some commentators have argued that this development raises questions about whether the EC's decision will ultimately benefit consumers, who may face higher device prices because of the new licensing fees.[183] But the legal relevance of this argument—that a decision attempting to promote competition in one market (online search) will harm consumers in another market (mobile devices)—remains open to debate. In horizontal-restraint and merger cases, some courts have rejected the proposition that competitive harms in one market can be balanced against competitive benefits in another market.[184] However, other courts have taken a different approach, concluding that it is appropriate to consider such cross-market tradeoffs in certain instances,

FTC, 454 F.2d 1083, 1089 (8th Cir. 1972) (explaining that "the anticompetitive effects of an acquisition in one market cannot be justified by procompetitive effects in another market").

EX 31

including tying cases.[185] Antitrust commentators also continue to debate whether and in what circumstances courts should balance harms in one market against benefits in another.[186] As a result, it is difficult to predict whether a court would accept the argument that any harm caused by Google's tying arrangements in the market for online search should be balanced against benefits in the market for mobile devices. Antitrust regulators, by contrast, may engage in such balancing in deciding whether to bring a case, whether or not cross-market tradeoffs would be relevant during subsequent litigation.[187]

Exclusive Dealing. Like a potential tying case, a challenge to Google's exclusivity agreements with device manufacturers would depend on the specific facts the DOJ uncovers during its investigation. In evaluating any payments Google has made to U.S. device makers in exchange for their agreement to pre-install only Google Search, a court would likely assess the impact of pre-installation on consumer behavior, the share of the market "foreclosed" by such agreements, the ability of competing search engines to offer such payments, and the strength of Google's procompetitive justifications for the payments.[188]

Similarly, a court evaluating Google's requirement that device manufacturers who pre-install Google Play and Google Search refrain from selling any devices that run Android forks would apply the Rule of Reason and balance the anticompetitive harms of that restriction against its procompetitive benefits. On the "harm" side of the ledger, U.S. regulators might follow the EC in arguing that such a restriction obstructs the development of Android forks, which may serve as important channels for the distribution of search engines and other apps that compete with Google products. In contrast, Google may respond (as it argued in the EC litigation) that this restriction is necessary to prevent a "fragmentation" of the Android ecosystem in which consumers would impute the poor technical standards of nonapproved Android forks to Android. However, the EC rejected this argument after concluding that Google failed to produce evidence suggesting that Android forks would suffer from serious technical problems.[189] U.S. antitrust regulators may also be able to rebut this "fragmentation" argument by demonstrating that Google could brand Android in a way that would adequately distinguish it from Android forks and thereby achieve the relevant procompetitive benefit by less restrictive means.[190]

Google AdSense: Exclusive Dealing

Finally, the DOJ may be investigating Google's agreements with websites that use its ad-brokering platform AdSense, which connects advertisers with "publisher" websites seeking ad revenue. During the FTC's 2011-2013 investigation, agency staff concluded that clauses in these

EX 32

agreements that prohibited or restricted publisher websites from doing business with competing ad-brokering platforms violated Section 2.[191] However, the FTC did not address this issue in announcing its unanimous decision not to charge Google with antitrust violations.[192]

In contrast, the EC concluded in March 2019 that similar clauses in Google's agreements with publisher websites violated EU antitrust law. In a press release announcing its conclusions, the EC identified three factual findings from its investigation:

- *First*, the EC found that from 2006-2009, some of Google's agreements with publisher websites contained "exclusivity" clauses prohibiting the websites from doing business with competing ad-brokering platforms.
- *Second*, the EC found that after 2009, Google began to replace these "exclusivity" clauses with "Premium Placement" clauses that required publisher websites to reserve the most visited and profitable spaces on their search results pages for ads brokered by AdSense.
- *Third*, the EC found that after 2009, some of Google's agreements with publisher websites required the websites to seek Google's written approval before making changes to the way that ads brokered by rival platforms were displayed, allowing Google to control how attractive those ads would be.[193]

The EC concluded that by engaging in these practices, Google used its dominant position in the market for "online search advertising intermediation" to illegally suppress competition.[194] Google is currently appealing the EC's decision.[195]

The analysis of these sorts of agreements in a U.S. antitrust case would involve the same type of inquiry as an analysis of the Android exclusivity provisions discussed above. That is, in evaluating a challenge to these types of provisions, a court would likely assess the share of the market "foreclosed" by such agreements, the duration of the agreements, whether competing ad-brokering platforms enter into these types of contracts with publisher websites, and the strength of Google's procompetitive justifications for the challenged provisions.[196]

Amazon

Commentators have identified a variety of competition-related issues surrounding Amazon. However, most of the antitrust discussion involving the e-commerce giant has concerned two general categories of conduct: discrimination against vertical rivals and predatory pricing.[197] In addressing Amazon's alleged vertical discrimination, a number of analysts have focused on the company's dual role as both the operator of Amazon Marketplace—a platform on which

merchants can sell their products directly to consumers—and as a merchant that sells its own private-label products on the Marketplace. Some commentators have alleged that Amazon exploits this dual role by implementing policies that privilege its own products over competing products offered by other sellers.[198] According to a 2016 ProPublica investigation, for example, Amazon has designed its Marketplace ranking algorithm—which determines the order in which products appear to consumers—to favor its own products and products sold by companies that buy Amazon's fulfillment services.[199] Similarly, certain merchants have complained that Amazon has revoked their ability to use its Marketplace after deciding to move into the relevant markets with its own private-label products or products it distributes on behalf of other companies.[200]

Some observers have also raised the possibility that Amazon may engage in predatory pricing by selling certain products at below-cost prices to eliminate rivals.[201] A number of these allegations involve Amazon's 2010 acquisition of Quidsi—the parent company of the online baby-products retailer Diapers.com and several other online-retail subsidiaries. According to some commentators, Amazon aggressively cut its prices for baby products after Quidsi rebuffed its initial offer to purchase the company.[202] When Amazon's below-cost prices began to impede Quidsi's growth, the company ultimately accepted Amazon's subsequent acquisition offer.[203] And after the Quidsi acquisition, Amazon allegedly raised its prices for baby products.[204] Other predatory-pricing allegations leveled against Amazon concern the company's sale of certain e-books. Specifically, some observers have argued that when it entered the e-book market in 2007, Amazon priced some categories of e-books below cost to eliminate potential competitors, ultimately securing 90% of the market by 2009.[205]

A monopolization case grounded in Amazon's alleged discrimination against third-party merchants would raise several issues. As a threshold matter, regulators bringing such a case would need to show that Amazon possesses monopoly power. While Amazon is significantly larger than its e-commerce rivals, most estimates place its share of the U.S. online retail market at below 50%.[206] However, the company's share of a narrower market for online marketplaces connecting third-party merchants with consumers may be considerably larger. Moreover, reports indicate that Amazon has very large shares of the markets for online sales of certain categories of products, including home-improvement tools, batteries, skin-care products, and (as discussed) e-books.[207]

If regulators could show that Amazon has monopoly power in a properly defined antitrust market, they would then need to establish that Amazon used that power to harm competition. Such a showing may be difficult under existing refusal-to-deal doctrine for some of the reasons discussed above in connection with Google's alleged search bias.[208] As discussed, in *Trinko*, the Supreme Court rejected Section 2 claims where it was unable to infer that a monopolist's refusal to deal with a competitor involved a desire to sacrifice short-term profits to eliminate the competitor from the market. Specifically, the Court was unable to discern such an intent because the monopolist in *Trinko* (unlike its counterpart in *Aspen Skiing*) had not terminated a previous course of dealing with the competitor or refused to sell the competitor a product that it offered to the public.[209]

The Court's reasoning in *Trinko* suggests that one type of refusal-to-deal claim against Amazon for its alleged vertical discrimination would be unlikely to succeed. If such a claim concerned Amazon's preferential ranking of its own private-label products on its Marketplace, it would be difficult to demonstrate that the challenged practice involves a sacrifice of short-term profits. Rather, just as Google likely maximizes its short-term profits by ranking its own vertical properties above those of competing websites, Amazon likely maximizes its short-term profits by giving its private-label products premium placement. A claim targeting this type of vertical discrimination is also unlikely to be viable under the essential-facilities doctrine, because Amazon cannot feasibly share access to the allegedly "essential" facility of top placement in its Marketplace product rankings.

In contrast, a refusal-to-deal claim premised on Amazon's decision to revoke certain merchants' ability to use its Marketplace altogether may present courts with a closer question. Such an action could involve termination of a previously profitable course of dealing, which can suggest an intent to sacrifice short-term profits in order to eliminate competitors.[210] This conduct may also provide the basis for an essential-facilities claim, as one commentator has argued that Amazon's Marketplace is dominant enough in certain online-retail markets to justify the conclusion that it qualifies as "essential" under the case law.[211] While a court's assessment of this argument would depend on a fact-intensive evaluation of the alternatives available to specific categories of third-party sellers, it is conceivable that lack of access to Amazon's Marketplace would inflict a "severe handicap" on merchants in at least some online-retail markets.[212] As a result, Amazon's outright termination of profitable relationships with certain third-party merchants may raise harder questions about the application of Section 2 doctrine.

Amazon may also be vulnerable to predatory-pricing claims. To the extent that commentators have accurately characterized the conduct surrounding the company's acquisition of Quidsi, Amazon may have engaged in below-cost pricing and exhibited a "dangerous probability" of recouping its losses by eliminating a key competitor from the market for online sales of certain baby products.[213] However, other predatory-pricing allegations against Amazon may raise more

EX 35

complicated issues. Amazon may be able to defend certain predatory-pricing charges on the grounds that the company intended certain products to be "loss leaders" that induced customers to purchase other products at above-cost prices.[214] A court's assessment of this defense would depend on a fact-intensive inquiry into the motivations behind Amazon's pricing of specific products.

Facebook

Most of the antitrust commentary directed toward Facebook has focused on its acquisitions of potential competitors—in particular, its 2012 acquisition of the photo-sharing service Instagram and its 2014 acquisition of the messaging service WhatsApp. In a March 2019 letter to the FTC, the Chairman of the House Antitrust Subcommittee urged the Commission to examine whether these acquisitions—which according to some estimates have resulted in Facebook owning three of the top four and four of the top eight social media applications—violated Section 7 of the Clayton Act.[215] Other legislators and commentators have echoed calls for regulators to unwind these acquisitions.[216]

The FTC appears to be taking these arguments seriously. In August 2019, the Wall Street Journal reported that Facebook's acquisition practices are a "central component" of the agency's investigation of the company.[217] In addition to potentially focusing on the Instagram and WhatsApp deals, the Journal reported that the FTC could also be evaluating Facebook's 2013 acquisition of Onavo Mobile Ltd.—a mobile-analytics company that may have allowed Facebook to identify fast-growing social media companies and purchase them before they became competitive threats.[218] Depending on the evidence that the FTC uncovers, Facebook's general acquisition strategy could plausibly serve as the basis for a Section 2 monopolization case to the extent that it suppressed competition.

The success of a case to unwind some of Facebook's acquisitions may depend on an assessment of the relevant market in which Facebook competes. Because Facebook does not charge users of its social network, this inquiry would require regulators to confront difficult conceptual issues with defining zero-price markets.[219] If the FTC views "social networks" or "social media platforms" as the relevant market in an action to unwind Facebook's key acquisitions, the strength of the agency's case would likely depend on the other companies that are included in the relevant market and the appropriate methodology for calculating market shares.[220] Because estimates of Facebook's dominance vary widely based on differences in each of these factors, the

[218] *Id*.

[219] *See* "Market Share" *supra*.

[220] A company's share of a zero-price "social media platform" market could conceivably be calculated based on its share of total daily active users in that market, its share of total user visits, or its share of the total time spent on the relevant platforms, for example.

company's market share would likely be vigorously litigated in an action to unwind its major acquisitions.[221]

However, regulators may seek to sidestep this process with direct evidence that the relevant acquisitions harmed competition. As discussed, while antitrust plaintiffs typically rely on indirect market-share evidence to show that a defendant has monopoly power, several courts have held that plaintiffs can also establish monopoly power with direct evidence of supra-competitive prices.[222] One commentator has sketched a general outline of the form such direct evidence might take, arguing that Facebook began to "degrade" user privacy only after the disappearance of major rivals.[223] While there is little case law on direct proof of monopoly power,[224] such evidence of quality degradation abruptly following the elimination of key competitors could plausibly serve as the type of "natural experiment" that allows regulators to establish that Facebook has monopoly power without defining the precise boundaries of the market in which it operates.[225]

If the FTC could establish that Facebook's acquisitions had anticompetitive effects either directly or indirectly, a court would then need to weigh those harms against any merger-specific efficiencies that Facebook can identify. In defending an enforcement action, Facebook might argue that its large post-acquisition investments in the relevant companies have improved their performance and accordingly benefited consumers.[226] However, the FTC may be able to rebut such a defense with evidence that these companies could have secured adequate funding through the capital markets or by showing that the anticompetitive harms of the acquisitions outweigh any investment-related benefits.

EX 37

Apple

Like Google, Apple has faced antitrust claims related to its mobile-device software. Specifically, the iPhone maker has faced separate class-action lawsuits related to its design of the device's operating system, iOS. In these lawsuits, classes of customers who purchased iPhone apps through the company's App Store and app developers claim that Apple has illegally monopolized the market for iPhone apps by designing iOS as a closed system and installing security measures to prevent customers from purchasing apps outside of the App Store.[227] In May 2019, the Supreme Court rejected Apple's contention that App Store customers lacked standing to challenge this conduct, allowing their lawsuit to proceed.[228] While these cases will accordingly continue to work their way through the courts, the DOJ may also be contemplating a similar action challenging Apple's design of iOS.

The outcome of these exclusionary-design cases against Apple will depend on the specific findings that emerge over the course of litigation. Like the *Microsoft* case, these lawsuits involve a fact pattern that appears to suggest strong prima facie evidence of anticompetitive harm. If "iPhone apps" represent a properly defined antitrust market, Apple's decision to design iOS in a manner that requires users to purchase apps only from the App Store limits competition in that market to one seller/distributor.[229] Section 2 claims challenging this conduct would accordingly depend on Apple's procompetitive justification for its design choices and the proper standard for evaluating that justification. If a court were to follow the D.C. Circuit's approach to these questions, it would balance the anticompetitive harms of Apple's product-design choices against their procompetitive benefits.[230] In contrast, a court following the more deferential standards applied by the Ninth Circuit in *Tyco Health Care Group* or the Second Circuit in *Berkey Photo* would likely side with Apple as long as the company could identify a plausible reason to conclude that the challenged design choices represent product improvements.[231] Such a justification may involve claims that the relevant security measures improve iPhone users' overall experience by preventing them from downloading technically unsound apps from non-App Store sources. However, the precise form that this type of argument would take remains to be seen.

The current circuit split on the appropriate analytical framework for exclusionary-design claims may be a factor that prompts the DOJ to bring its own lawsuit challenging Apple's design of iOS. Both of the pending lawsuits have been brought in the Ninth Circuit, which will presumably follow its defendant-friendly precedent in *Tyco Health Care Group*.[232] If the DOJ were to pursue litigation against Apple, regulators may accordingly choose to sue in a different circuit with more favorable case law. Although it is still early days, a DOJ lawsuit that further entrenches the circuit

split surrounding exclusionary-design analysis may ultimately cause the Supreme Court to step in and clarify the doctrine.[233]

Options for Congress

While the antitrust action surrounding the Big Four is currently concentrated in the executive branch and the courts, digital competition issues have also attracted the interest of Congress, which may pursue legislation to address anticompetitive conduct by large technology companies.[234] Such legislation could take two general forms. First, some commentators have proposed that Congress enact certain changes to existing antitrust doctrine to promote digital competition.[235] Second, a number of lawmakers and academics have advocated legislation that would impose sector-specific competition regulation on large technology companies.[236] The subsections below discuss each category of potential legislation in turn.[237]

Changes to Antitrust Law

A number of commentators have proposed that Congress adopt certain changes to existing antitrust doctrine to promote competition in technology markets. These proposals include:

- ***Changes to Predatory-Pricing Doctrine*.** Some observers have proposed changes to predatory-pricing doctrine with an eye toward addressing the pricing practices of dominant technology firms like Amazon. Specifically, one commentator has criticized *Brooke Group*'s "recoupment" requirement on the grounds that it does not adequately deter predatory pricing by dominant online platforms.[238] According to this line of criticism, *Brooke Group*'s requirement that plaintiffs demonstrate a "dangerous probability" of recoupment fails to account for dominant platforms' unique ability to persist in charging below-cost prices for years and employ difficult-to-detect recoupment strategies like price discrimination among different categories of customers. As a result, this commentator has advocated a presumption that below-cost pricing by dominant platforms qualifies as prohibited exclusionary conduct.[239]

  Other academics have criticized the first *Brooke Group* requirement, which demands that predatory-pricing plaintiffs show that a monopolist charged below-

[234] *See* Tracy, *supra* note 9.

[235] *See* "Changes to Antitrust Law" *infra*.

[236] *See* "Sector-Specific Regulation" *infra*.

[237] A number of commentators have rejected the proposition that the Big Four raise unique competition concerns that justify changes in public policy. *See, e.g.*, Eric Boehm, *The Justice Department's 'Big Tech' Antitrust Investigation Is Unnecessary Political Theater*, REASON (July 24, 2019), https://www.reason.com/2019/07/24/the-justice-departments-big-tech-antitrust-investigation-is-unnecessary-political-theater/; John Lopatka, *Big Tech and Antitrust*, TRUTH ON THE MARKET (July 19, 2019), https://www.truthonthemarket.com/2019/07/19/big-tech-and-antitrust/; Bourne, *supra* note 74. This report catalogues several legislative options concerning the promotion of digital competition without assessing the arguments offered against such regulation.

[238] Khan, *Amazon's Antitrust Paradox*, *supra* note 82, at 791-92.

[239] *Id*.

cost prices.[240] These commentators argue that pricing-cutting can be anticompetitive even when a firm prices its products above cost, especially in cases where a monopolist aggressively cuts prices in order to prevent a new rival from recovering its entry costs or realizing economies of scale.[241] To address this concern, these observers contend that courts should evaluate whether challenged price-cutting strategies exclude potential entrants without screening predation claims with a price-cost test.[242] Congress could accordingly remedy this alleged defect in current predatory-pricing doctrine with legislation eliminating the first *Brooke Group* requirement.

- ***Enhanced Merger Review for Dominant Technology Companies*.** Some commentators have advocated stricter scrutiny for mergers and acquisitions by dominant technology companies, including a rebuttable presumption that mergers and acquisitions between certain monopolist technology companies and their potential competitors are unlawful.[243] A number of academics have also suggested that because promising technology startups often fall below the minimum-size thresholds that trigger DOJ and FTC review under the HSR Act, Congress should consider lowering or eliminating those thresholds for deals involving dominant technology companies.[244]
- ***Enhanced Scrutiny of Product Design Decisions*.** Finally, some observers have argued that courts should be less deferential toward defendants' justifications of allegedly exclusionary product designs, arguing that product-design decisions are often "key elements" of large technology companies' business strategies.[245] Congress could accordingly consider legislation to clarify the appropriate standards for evaluating exclusionary-design claims, perhaps by making clear that such claims are subject to full Rule-of-Reason scrutiny rather than the more permissive tests adopted by certain lower federal courts.[246]

[242] BAKER, *supra* note 186, at 147-49; *see also* Chicago Digital Competition Report, *supra* note 43, at 76 (arguing that predatory-pricing doctrine has become overly rigid and should accordingly "be modified so that it will be better able to combat anticompetitive pricing by digital platforms and other firms").

[243] Chicago Digital Competition Report, *supra* note 43, at 78. According to these commentators, the relevant characteristics that should trigger enhanced scrutiny are factors that suggest that a firm possesses "bottleneck power," a phenomenon whereby a firm possesses significant market power because consumers "single home" and use only one service provider. *Id*. at 84-85. However, legislation adopting enhanced merger standards for technology monopolists could plausibly rely on a variety of other standards for identifying the companies subject to heightened scrutiny. *See, e.g.*, Harold Feld, *The Case for the Digital Platform Act: Market Structure and Regulation of Digital Platforms*, ROOSEVELT INST. 30 (May 2019) (proposing a three-part test for identifying dominant "digital platforms" that should be subject to sector-specific competition regulation); Khan, *Platforms*, *supra* note 150, at 1080-82 (proposing a nonexhaustive five-factor test for identifying firms with "bottleneck power").

EX 40

Sector-Specific Regulation

As discussed, academic commentators have argued that certain digital markets possess structural characteristics that advantage large incumbent firms.[247] In some cases, dominant firms in these markets can enhance such entry barriers by making it difficult for consumers to "multi-home" or use complementary products offered by competitors, and courts evaluating challenges to these product-design choices hesitate to hold companies liable under existing antitrust doctrine.[248] Moreover, vertically integrated technology monopolists do not face general nondiscrimination rules requiring them to deal evenhandedly with rivals in adjacent markets.[249] Some analysts have accordingly argued that large technology platforms require sector-specific regulations to address these competition concerns. These proposed regulations include "data mobility" rules giving consumers greater ability to control their data and move it to competing platforms, "interoperability" standards requiring companies to minimize technical impediments to the use of complementary products, and nondiscrimination requirements prohibiting vertically integrated technology monopolists from discriminating against rivals who use their platforms.[250] Congress could legislate such requirements, direct an existing federal agency to develop them through rulemaking, or create a new agency tasked with regulating the technology industry.

A number of lawmakers and academics have also argued that the infrastructure-like features of certain digital services justify separation regimes prohibiting monopolists that provide those services from entering adjacent markets.[251] Such separation regimes are not without precedent. Historically, Congress and federal regulators have imposed a variety of structural prohibitions limiting the lines of business in which certain categories of firms—including railroads, banks, television networks, and telecommunications companies—can engage.[252] Commentators have justified these separation regimes on the grounds that they eliminate conflicts of interest that lead companies in key infrastructure-like sectors to discriminate against their vertical rivals.[253] While the nondiscrimination requirements discussed above represent one means of addressing this concern, categorical separation rules are an alternative to such requirements that may prove easier to administer.

In March 2019, Senator Elizabeth Warren proposed one type of separation regime for dominant technology companies, arguing that large "platform utilities"—including "online marketplaces," "exchanges," and "platforms for connecting third parties"—should be prohibited from owing

EX 41

companies that participate on their platforms.[254] The Chairman of the House Antitrust Subcommittee has also expressed support for similar separation requirements.[255]

Congress may also be interested in broader separation regimes prohibiting dominant technology platforms from entering other types of markets. Specifically, many lawmakers have expressed concern about Facebook's announcement that it intends to develop a new cryptocurrency.[256] These worries have generated a legislative proposal to prevent any large technology platform from entering the financial industry, with Members on the House Financial Services Committee circulating draft legislation titled the Keep Big Tech Out of Finance Act.[257] This draft bill would prohibit "large platform utilities" from (1) affiliating with financial institutions, or (2) establishing, maintaining, or operating digital assets intended to be "widely used as a medium of exchange, store or value, or any other similar function."[258]

From: Cheryl Johnson
To: Brian Hebert
Attachments: ACR 96 workplan.docx, CLRC NYS Law 933c.docx

Dear Mr. Hebert,

I am writing to you solely in my individual capacity as a retired antitrust lawyer, and in response to the CLRC's request on its website for comments about ACR 95. Understanding that ACR 95 requires the CLRC to prepare a workplan in connection with its study of California's antitrust laws, I have attached two documents broadly describing some approaches and strategies used by others who have examined our antitrust laws in the last few years. Please feel free to call with any questions.

Best,
Cheryl Johnson

ACR 95- POTENTIAL RESOURCES AND EXPERT OUTREACH/WORK PLANS FROM PRIOR DIGITAL PLATFORM/CONSOLIDATION STUDIES

I. The Stigler Report Model: Stigler Committee on Digital Platforms, Final Report, September 2019, available at https://research.chicagobooth.edu/stigler/media/news/committee-on-digitalplatforms-final-report

The Stigler Center for the Study of the Economy and the State, part of the University of Chicago Booth School of Business. conducted a study and issued a report in 2019 on the effects of the digital platforms on the economy, antitrust law, data protection, and the political system. This report was often cited by the House of Representatives' own 2020 report on Competition in the Digital Markets.

The Stigler Center started the research on its own as a result of widespread concerns about the rise of Digital Platforms (DPs), such as Google, Facebook, Amazon, Apple. As the number of scandals involving DPs increased, "concerns about their unchecked power started to emerge that were not limited to economic aspects (are these companies moving to prevent any competition?) or privacy (are we in an age of surveillance capitalism?) Abroad, these issues were studied by government-appointed committees—from the EU to the UK or Australia. In the United States—where no government committee was formed—proposals to check their power were "reactions to the perceived threat posed by DPs, with little to no analysis of the underlying root problems, let alone a link between market failures and remedies. To fill this void, the George J. Stigler Center at the University of Chicago Booth School of Business decided to organize an independent Committee on Digital Platforms."

- **The Study:**

The independent and non-partisan Committee – composed of more than 30 highly-respected academics, policymakers, and experts – spent over a year studying in-depth how Digital Platforms such as Google and Facebook impact: economy and antitrust laws; data protection; the political system; and the news media industry. Each subcommittee report addresses in detail how Digital Platforms impact these different facets of our society and proposes a range of policy solutions for lawmakers and regulators to consider when addressing the power held by these companies. In addition, the report contains a policy brief that summarizes the main report findings and proposes cohesive policy solutions." From

https://www.chicagobooth.edu/research/stigler/news-and-media/committee-on-digital-platforms-final-report.

- **Organization and Four Subcommittees of Experts on Impact of Digital Platforms:**

The Stigler Committee, under the leadership of key Stigler Center personnel formed four separate subcommittees composed of over 30 experts as to the impact of the digital platforms in four separate areas. It did so with the Stigler Center leadership consisting of Luigi Zingales, Robert C. McCormack Distinguished Service Professor of Entrepreneurship and Finance, University of Chicago Booth School of Business. Director, the George J. Stigler Center for the Study of the Economy and the State; Guy Rolnik, Clinical Associate Professor of Strategic Management, University of Chicago Booth School of Business; and Filippo Maria Lancieri, Fellow, George J. Stigler Center for the Study of the Economy and the State. JSD Candidate, University of Chicago Law School.

They formed four subcommittees, composed of experts in the area of focus; and each subcommittee studied and issued a subcommittee report:

1. **Subcommittee on Market Structure and Antitrust**

Chair: Fiona Scott Morton, Theodore Nierenberg Professor of Yale University School of Management

Pascal Bouvier, Managing Partner and co-founder, MiddleGame Ventures

Ariel Ezrachi, Slaughter and May Professor of Competition Law and Fellow of Pembroke College, University of Oxford

Bruno Jullien, Research Faculty, Toulouse School of Economics

Roberta Katz, Senior Research Scholar, Stanford University

Gene Kimmelman, President and CEO, Public Knowledge

Douglas Melamed, Professor of the Practice of Law, Stanford Law School

Jamie Morgenstern, Assistant Professor, School of Computer Science, Georgia Tech

2. Subcommittee on the News Media Industry

Chair: Guy Rolnik, Clinical Associate Professor of Strategic Management, University of Chicago Booth School of Business

Julia Cage, Assistant Professor of Economics, Sciences Po Paris

Joshua Gans, Professor of Strategic Management and Jeffrey S. Skoll Chair of Technical Innovation and Entrepreneurship, Rotman School of Management, University of Toronto

Ellen Goodman, Professor of Law, Rutgers University

Brian Knight, Professor of Economics, Brown University

Andrea Prat, Richard Paul Richman Professor of Business and Professor of Economics, Columbia University

Anya Schiffrin, Director of the Technology, Media, and Communications specialization, School of International and Public Affairs, Columbia University

3.Subcommittee on Privacy and Data Protection

Chair: Lior Strahilevitz, Sidley Austin Professor of Law, University of Chicago;

Lorrie Cranor, Director and Bosch Distinguished Professor in Security and Privacy Technologies, CyLab Privacy and Security Institute; FORE Systems Professor, Computer Science and Engineering & Public Policy, Carnegie Mellon University;

Florencia Marotta-Wurgler, Professor of Law, New York University School of Law;•

Jonathan Mayer, Assistant Professor of Computer Science and Public Affairs, Princeton University;

Paul Ohm, Professor of Law and Associate Dean for Academic Affairs, Georgetown University Law Center;

Katherine Strandburg, Alfred B. Engelberg Professor of Law, New York University School of Law;

Blase Ur, Neubauer Family Assistant Professor of Computer Sciences, University of Chicago.

4. **Subcommittee on Politics**

Chair: Nolan McCarty, Susan Dod Brown Professor of Politics and Public Affairs, Princeton University

Rana Foroohar, Global Business Columnist and Associate Editor, Financial Times

Andrew Guess, Assistant Professor of Politics and Public Affairs, Princeton University

David Lazer, Professor of Political Science, Northeastern University

Alexandra Siegel, Postdoctoral Fellow, Stanford University

Nick Stephanopoulos, Professor of Law and Herbert and Marjorie Fried Research Scholar, University of Chicago

Joshua Tucker, Professor of Politics, New York University:

- **Timing and Vetting of the Subcommittee Reports:**

For over a year, the members of each subcommittee dedicated a significant amount of time to develop a set of cohesive, independent studies on how DPs impact modern society. Draft versions of each subcommittee's white paper were featured at the Stigler Center's 2019 Antitrust and Competition Conference, which brought together more than 130 highly regarded academics and policy experts to discuss these topics. At the conference, each white paper received detailed feedback by two independent commentators representing different points of view, along with more general feedback from the audience.

The above detail is from the Stigler Report at https://www.chicagobooth.edu/-/media/research/stigler/pdfs/digital-platforms---committee-report---stigler-center.pdf. See additional

details/summaries on https://www.promarket.org/2019/09/17/how-to-rein-in-big-tech-stigler-committee-digital-platforms/.

II. House of Representatives: Investigation into Competition in the Digital Markets, available at https://judiciary.house.gov/uploadedfiles/competition_in_digital_markets.pdf?utm_campaign=4493-519

- **Nature of Study (from the Majority report):**

In June 2019, the Committee on the Judiciary (of the House of Representatives) initiated a bipartisan investigation into the state of competition online, spearheaded by the Subcommittee on Antitrust, Commercial and Administrative Law. As part of a top-to-bottom review of the market, the Subcommittee examined the dominance of Amazon, Apple, Facebook, and Google, and their business practices to determine how their power affects our economy and our democracy. Additionally, the Subcommittee performed a review of existing antitrust laws, competition policies, and current enforcement levels to assess whether they are adequate to address market power and anticompetitive conduct in digital markets.

The Subcommittee on Antitrust, Commercial and Administrative Law of the Committee on the Judiciary, House of Representatives, produced a 336 page report entitled *Investigation of Competition in Digital Markets*, 2020, Majority Report available at https://judiciary.house.gov/uploadedfiles/competition_in_digital_markets.pdf?utm_campaign=4493-519 (comprehensive study by the House of Representatives investigating competition in the digital markets and with Amazon, Apple, Google and Facebook in detail, and the effects of platform market power, reviews of each of the dominant platforms, and recommendations for their regulation and restoration of competition in those markets). Rep. Ken Buck authored the Minority report responding to the Majority Report, entitled *The Third Way: Antitrust Enforcement in Big Tech*, October 6, 2020, available at https://buck.house.gov/media-center/press-releases/rep-buck-pens-antitrust-

report-presents-third-way-take-big-tech (offering narrower or more targeted alternatives to providing the resources for government to rein in the abuses of Big Tech)

- **Evidence Gathered by the Subcommittee**

  Over the course of its investigation, it collected extensive evidence from the four dominant platform companies as well as from third parties—totaling nearly 1.3 million documents. Seven hearings to review the effects of market power online—including on the free and diverse press, innovation, and privacy— and a final hearing to examine potential solutions to concerns identified during the investigation and to inform this Report's recommendations were held. A year after initiating the investigation, the Subcommittee received testimony from the Chief Executive Officers of the investigated companies: Jeff Bezos, Tim Cook, Mark Zuckerberg, and Sundar Pichai.

- **Expert Outreach:**

  The Committee sent letters on March 13, 2020, soliciting insights and analysis from several dozen antitrust experts who were identified on a bipartisan basis and whose submissions represent a diverse range of experience and perspectives. In support of the investigation's objective to assess the adequacy of existing antitrust laws, competition policies, and current enforcement levels, the Committee invited submissions on three main topics. The first topic covered the adequacy of existing laws—case law and statutes—that prohibit monopolization and monopolistic conduct. The second topic similarly dealt with the adequacy of existing law but focused on its sufficiency to address anticompetitive mergers and acquisitions, including vertical and conglomerate mergers, serial acquisitions, data acquisitions, and strategic acquisitions of potential competitors. Third, the Committee sought feedback on whether the institutional structure of antitrust enforcement is adequate to promote the robust enforcement of the antitrust laws, including current levels of appropriations to the antitrust agencies, existing agency authorities, and congressional oversight of enforcement. From pages 27-

EX 49

28 of the report. (CJ Note: the report does not include the names of the experts that responded)

- **Expert Testimony at Hearings**

Numerous experts holding a wide variety of views were invited to testify and answer questions at the Subcommittee hearings. Their testimony along with their prepared remarks are online on https://docs.house.gov/meetings/ Those experts and market participants testifying in the hearings were:

On June 11, 2019, the Subcommittee held part one of its series of investigation hearings titled "Online Platforms and Market Power, Part 1: The Free and Diverse Press." At this hearing, the Subcommittee heard testimony from the following

> Majority witnesses: David Chavern, President of the News Media Alliance; Gene Kimmelman, President and CEO of Public Knowledge; Sally Hubbard, Director of Enforcement Strategy at Open Markets Institute (OMI); and Matthew Schruers, Vice President for Law and Policy at Computer and Communications Industry Association (CCIA).
>
> Minority witnesses were David Pitofsky, General Counsel for News Corp; and Kevin Riley, Editor of the Atlanta-Journal Constitution.

On July 16, 2019, the Subcommittee held its second hearing, a two-paneled hearing titled "Online Platforms and Market Power, Part 2: Innovation and Entrepreneurship." On the first panel, the Subcommittee heard testimony from the following:

> Adam Cohen, Director of Economic Policy at Google; Nate Sutton, Associate General Counsel, Competition, at Amazon; Matt Perault, Head of Global Policy Development at Facebook; and Kyle Andeer, Vice President and Corporate Law and Chief Compliance Officer at Apple.

On the second panel, the Subcommittee heard testimony from the following

Majority witnesses: Timothy Wu, Julius Silver Professor of Law, Science and Technology at Columbia Law School; Fiona Scott Morton, Theodore Nierenberg Professor of Economics at Yale University School of Management; and Stacy Mitchell, Co-Director of the Institute for Local SelfReliance.

Minority witnesses were Maureen Ohlhausen, Partner at Baker Botts and former Commissioner and Acting Chairwoman of the Federal Trade Commission; Morgan Reed, Executive Director of The App Association; and Carl Szabo, Vice President and General Counsel at NetChoice.

On October 18, 2019, the Subcommittee held its third hearing titled “Online Platforms and Market Power, Part 3: The Role of Data and Privacy in Competition.” At this hearing, the Subcommittee heard testimony from the following

Majority witnesses: the Honorable Rohit Chopra, Commissioner at the Federal Trade Commission; Dr. Jason Furman, Professor of the Practice of Economic Policy at Harvard Kennedy School and former Chairman of the Council of Economic Advisers (CEA); and Dr. Tommaso Valletti, Professor of Economics and Head of the Department of Free and Diverse Press Hearing,

The Minority witness at the hearing was Dr. Roslyn Layton, Visiting Scholar at the American Enterprise Institute.

On November 13, 2019, the Subcommittee held its fourth hearing titled “Online Platforms and Market Power, Part 4: Perspectives of the Antitrust Agencies.” At this hearing, the Subcommittee heard testimony from the following witnesses:

The Honorable Makan Delrahim, Assistant Attorney General for the Antitrust Division at the Department of Justice; and the Honorable Joseph J. Simons, Chairman of the Federal Trade Commission.

EX 51

On January 17, 2020, the Subcommittee held its fifth hearing titled "Field Hearing: Online Platforms and Market Power, Part 5: Competitors in the Digital Economy." At this hearing, which took place in the congressional district of Subcommittee Vice Chairman Joe Neguse (D-CO) at the University of Colorado School of Law, the Subcommittee heard testimony from the following:

> Majority witnesses: Patrick Spence, Chief Executive Officer of Sonos; David Barnett, Founder and Chief Executive Officer of PopSockets; and Kirsten Daru, Vice President and General Counsel at Tile.
>
> Minority witness at the hearing was David Heinemeier Hansson, Cofounder and Chief Technology Officer of Basecamp.

On July 29, 2020, the Subcommittee held its sixth hearing titled "Online Platforms and Market Power, Part 6: Examining the Dominance of Amazon, Apple, Facebook, and Google." At this hearing, the Subcommittee heard testimony from the following witnesses:

> Jeff Bezos, Chief Executive Officer at Amazon; Sundar Pichai, Chief Executive Officer at Alphabet and Google; Tim Cook, Chief Executive Officer at Apple; and Mark Zuckerberg, Chief Executive Officer at Facebook.

On October 1, 2020, the Subcommittee held its seventh hearing titled "Proposals to Strengthen the Antitrust Laws and Restore Competition Online." The

> Majority witnesses at the hearing included: William Baer, Visiting Fellow, Brookings Institution, and former Associate Attorney General, Department of Justice; Zephyr Teachout, Associate Professor of Law, Fordham University School of Law; Michael Kades, Director of Markets and Competition Policy, Washington Center for Equitable Growth; Sabeel Rahman, Associate Professor of Law, Brooklyn Law School and President, Demos; and Sally Hubbard, Director of Enforcement Strategy, Open Markets Institute.

Minority witnesses at the hearing were Christopher Yoo, John H. Chestnut Professor of Law, Communication, and Information Science, University of Pennsylvania Carey Law School; and Rachel Bovard, Senior Director of Policy, Conservative Partnership Institute; and Tad Lipsky, Antonin Scalia Law School, George Mason University

III. FTC-2022-0003:FTC's Request for Public Comments on Merger Enforcement

The FTC requested public comments on the public's views on merger enforcement in 2022, (see comments of FTC Chair, Lina Khan, available at https://www.ftc.gov/system/files/documents/public_statements/1599783/statement_of_chair_lina_m_khan_regarding_the_request_for_information_on_merger_enforcement_final.pdf.)

The FTC's specific request for information about merger enforcement that was posted follows:

> U.S. Department of Justice U.S. Federal Trade Commission January 18, 2022, Request for Information on Merger Enforcement
>
> The Federal Trade Commission and Antitrust Division of the Department of Justice ("the agencies") seek public comment on how the agencies can modernize enforcement of the antitrust laws regarding mergers. The Commission and the department have a long history of developing and publishing frameworks for the analysis of mergers under the antitrust laws. The merger guidelines set forth analytical techniques, practices, and enforcement policy of the agencies, and are under review to ensure that they (1) reflect current learning about competition based on modern market realities, and (2) faithfully track the statutory text, legislative history, and established case law around merger enforcement.
>
> A key overriding question is how effectively the current guidance documents capture the competitive issues raised by mergers today and whether these documents adequately equip enforcers to identify and proscribe unlawful, anticompetitive transactions. In support of this review, the agencies seek new learning related to firm and market behavior and comments on how these advances should inform the guidelines. The agencies are particularly interested in aspects of competition the guidelines may underemphasize or neglect, such as

> labor market effects and non-price elements of competition like innovation, quality, potential competition, or any "trend toward concentration." Finally, the agencies seek specific examples of mergers that have harmed competition, with descriptions of how the merger harmed competition, including how those mergers made it more difficult for customers, workers, or suppliers to work with the merged firm or competitors of the merged firm or made it more difficult for rivals to compete with the merged firm.
>
> The agencies encourage the public, including market participants, government entities, economists, attorneys, academics, unions, workers, farmers, ranchers, businesses, franchisees, and consumers, to share feedback, evidence, and ideas that will lead to the development of merger enforcement and policy guidance. The agencies invite submissions addressing the following questions: 1. Purpose, Harms, and Scope a. Does the analytical framework described in the guidelines properly reflect the text and purpose of the Clayton Act, namely, to prevent mergers and acquisitions whose effect "may be substantially to lessen competition, or to tend to create a monopoly"? Are the guidelines sufficiently clear that mergers may be enjoined when there is sufficient risk that they will substantially lessen competition in any relevant downstream or upstream market? Are they sufficiently clear about the circumstances in which mergers may be enjoined because they tend to create a monopoly? b. What effects should be covered by the term "lessen competition"? c. Do the guidelines sufficiently reflect the Act's concern with mergers that "may" substantially lessen competition? d. Do the guidelines reflect any additional competitive concerns reflected in the statute's prohibition against mergers that "may … tend to create a monopoly"? Is this statutory language directed at preventing monopolies in their incipiency such as through serial acquisitions, including rollups? How should the guidelines address a merger that may tend to create a monopoly? How should the guidelines analyze whether there is a "trend toward concentration in the industry," and what impact should such a trend have on the analysis of an individual transaction? e. Do the guidelines sufficiently reflect the observation that assessing the likely effects of a merger "is not the kind of question which is susceptible of a ready and precise answer in most cases"? f. Are the guidelines sufficiently "alert to the danger of subverting congressional intent by permitting a too-broad economic investigation"? Over 6,000 comments have been received by the FTC, and over 1,000 were posted by the FTC.

The request and the comments received by the FTC are posted at https://www.regulations.gov/docket/FTC-2022-0003. The posted comments are searchable. The FTC received some 5,825 comments and posted some 1,906 from a wide variety of governmental and private entities, special interest groups, and law firms. Over 60 of those posted comments were penned by professors or academics who have written or taken various positions in this space.

IV. Senate hearings on Consolidation in 2021 and 2022

- On December 15, 2021, the Senate held a hearing on "The Impact of Consolidation and Monopoly Power on American Innovation" , available at https://www.judiciary.senate.gov/meetings/the-impact-of-consolidation-and-monopoly-power-on-american-innovation. Those testifying were:

    i. **Diana Moss,** President, American Antitrust Institute, Denver, CO

    ii. **Alex Harman,** Competition Policy Advocate, Public Citizen, Washington, D.C.

    iii. **Eric Migicovsky,** Beeper, Palo Alto, CA

    iv. **Bettina Hein,** Co-Founder And CEO, Juli, Boston, MA

    v. **Roger Alford,** Professor, Notre Dame Law School, Notre Dame, IN

- The Senate Judiciary has held many hearings on competition in several industries, including healthcare, pharmaceutical and food industries, which showcase the experts on competition in those industries.

- For instance, a May 19, 2021, hearing on hospital consolidation entitled "Antitrust Applied: Hospital Consolidation Concerns and Solutions", featured the following experts whose testimony is generally available on the Senate Judiciary website at https://www.judiciary.senate.gov/hearings/watch?hearingid=D4C1D30F-5056-A066-60BA-6DC0B57AAE5F:

    1. **Professor Martin S. Gaynor,** E.J. Barone University Professor of Economics and Public Policy, Carnegie Mellon University ,Pittsburgh, PA
    2. **Ms. Beth McCracken,** Pittsburgh, PA
    3. **Mr. Michael Cannon,** Director of Health Policy Studies, Cato Institute, Washington D.C.
    4. **Dr. Rodney Hochman,** President and CEO Of Providence, Chair of the American Hospital Association, Renton, WA
    5. **Mr. Ahmer Qadeer,** Director of Strategic Initiatives, Service Employees International Union, New York, NY
    6. **Dr. Brian Miller,** Assistant Professor of Medicine, John Hopkins School of Medicine, Washington D.C.

- On June 15, 2022, the Senate held a hearing on "Baby Formula and Beyond: The Impact of Consolidation on Families and Consumers", available at https://www.congress.gov/event/117th-congress/senate-event/332712?s=1&r=7. An alternative url is https://www.judiciary.senate.gov/meetings/baby-formula-and-beyond-the-impact-of-consolidation-on-families-and-consumers. Those testifying at this hearing were:

1. Barry Lynn, Executive Director, Open Markets Institute, Washington, D.C

2. Ginger Carney, Director of Clinical Nutrition, St. Jude Children's Research Hospital, Memphis, TN

3. Scott Lincicome, Director, General Economics and Herbert A. Stiefel Center for Trade Policy Studies, CATO Institute, Washington, D.C.,
4. Jeanette Contreras, Director of Health Policy, National Consumers League, Washington, D.C.

V. The Program on Democracy and the Internet at Stanford: Report of the Working Group on Platform Scale, available at https://cyber.fsi.stanford.edu/publication/report-working-group-platform-scale

- **Origin and Scope of Stanford Study and previous studies by others**:

From : https://cyber.fsi.stanford.edu/publication/report-working-group-platform-scale

The Program on Democracy and the Internet at Stanford University convened a working group in January 2020 to consider the scale, scope, and power exhibited by the digital platforms, study the potential harms they cause, and, if appropriate, recommend remedial policies. The group included a diverse and interdisciplinary group of scholars, some of whom had spent many years dealing with antitrust and technology issues.

A number of other groups and organizations have addressed concerns about digital platform dominance in recent years, including the Stigler Center at the University of Chicago, the Thurmond Arnold Project at Yale, the Berkman Klein Center at Harvard,

the Shorenstein Center at the Harvard Kennedy School, the Open Markets Institute, and Germany's "Competition Law 4.0" Commission. Most of these groups focused on issues of monopoly power within the framework of existing US antitrust and European competition law, asking whether and how the platforms might have violated those laws, offering potential remedies, and, in some cases, suggesting modifications of current law to deal with specific characteristics of digital services. The European Commission has also conducted numerous antitrust investigations of digital platforms and is in the process of updating EU competition regulation. In the US, several Congressional committees have been investigating the platforms for potential antitrust violations, as has a group of state attorneys-general, and the Department of Justice recently filed an antitrust suit against Google.

Our Working Group determined early on that we did not wish to duplicate the prior analyses of how existing (or modified) antitrust laws might apply to the digital platforms, though we refer to and elaborate on such analyses in our discussions of harms and remedies below. Antitrust laws address harm to competition that results from anticompetitive conduct, essentially focusing on abuses of economic power, but the potential harms to society from the dominant platforms are not solely economic. The scale and concentrated power of the platforms also cause social harms, including loss of privacy and monopolization and manipulation of attention, and political harms, including threats to democratic discourse and deliberation and, ultimately, to democratic choice in the electoral process.

- **The experts/ authors of the Stanford study**:

  This was an interdisciplinary project with only two of the six members having law backgrounds:

  > Francis Fukuyama is the Olivier Nomellini Senior Fellow at Stanford University's Freeman Spogli Institute for International Studies (FSI), Mosbacher Director of FSI's Center on Democracy, Development, and the Rule of Law (CDDRL), and Director of Stanford's Masters in International Policy Program. He is also a professor (by courtesy) of Political Science. Dr. Fukuyama has written widely on issues in development and international politics. His 1992 book, The End of History and the Last Man, has appeared in over twenty foreign editions. His most recent book, Identity: The Demand for Dignity and the Politics of Resentment, was published in September 2018.

EX 57

Barak Richman is the Katharine T. Bartlett Professor of Law and Business Administration at Duke University. His primary research interests include the economics of contracting, new institutional economics, antitrust, and health care policy. In 2006, he co-edited with Clark Havighurst a symposium volume of Law and Contemporary Problems entitled "Who Pays? Who Benefits? Distributional Issues in Health Care," and his book Stateless Commerce was published by Harvard University Press in 2017. During 2019-2020, he was a Visiting Scholar at the Stanford University School of Medicine and was a member of Stanford's Program on Democracy and the Internet's Working Group on Platform Scale.

Ashish Goel is a Professor of Management Science and Engineering and (by courtesy) Computer Science at Stanford University. He received his PhD in Computer Science from Stanford in 1999 and was an Assistant Professor of Computer Science at the University of Southern California from 1999 to 2002. His research interests lie in the design, analysis, and applications of algorithms.

Douglas Melamed practiced law for 43 years before spending the 2014-15 academic year at the Stanford Law School as the Herman Phleger Visiting Professor of Law. He was appointed Professor of the Practice of Law in 2015. From 2009 until 2014, Professor Melamed was Senior Vice President and General Counsel of Intel Corporation. Prior to joining Intel in 2009, he was a partner in the Washington, DC, office of WilmerHale, a global law firm in which he served as a chair of the Antitrust and Competition Practice Group. He joined WilmerHale's predecessor in 1971. From 1996 to 2001, Professor Melamed served in the US Department of Justice as Acting Assistant Attorney General in charge of the Antitrust Division and, before that, as Principal Deputy Assistant Attorney General. He is a Lifetime Member of the American Law Institute and a contributing editor of the Antitrust Law Journal.

Roberta Reiff Katz, lawyer and cultural anthropologist, is a Senior Research Scholar at the Center for Advanced Study in the Behavioral Sciences (CASBS) at Stanford University. At Stanford, she also served as Chief of Staff to the President and Associate VP for Strategic Planning. Ms. Katz was Special Advisor to the Assistant Attorney General for Antitrust, U.S. Department of Justice, in 2009-10. In prior years, Ms. Katz was CEO of the Technology Network (TechNet) and Senior VP and General Counsel of Netscape Communications Corporation and of McCaw Cellular Communications (now AT&T Wireless) and its subsidiary, LIN Broadcasting Corporation.

Marietje Schaake is the International Policy Director at Stanford University's Cyber Policy Center and International Policy Fellow at Stanford's Institute for Human-Centered Artificial Intelligence. She was

named President of the Cyber Peace Institute. Between 2009 and 2019, Marietje served as a Member of European Parliament for the Dutch liberal democratic party where she focused on trade, foreign affairs, and technology policies. Marietje is affiliated with a number of nonprofits including the European Council on Foreign Relations and the Observer Research Foundation in India and writes a monthly column for the Financial Times and a bi-monthly column for the Dutch NRC newspaper.

- **Product/Results of Stanford Study**

The working group issued a 46 page report, which covered the key features of digital platforms that pose “current policy challenges”, the economic, political and social harms, and the various policy interventions, with emphasis on remedies for political harms, including most particularly, the possibilities of the middleware intervention. P. 9 Among other findings, they concluded that the antitrust laws do not provide adequate remedies for non-economic harms from the digital platforms and discussed at length some possible use of “middleware” to blunt the impact of the platforms on political harms.

NEW YORK'S 21ST-CENTURY ANTITRUST ACT (933C)

1. The New York 21st-Century Antitrust Act Bill and some commentary:
   a. New York State Senate, *Twenty-First Century Anti-Trust Act*, SB 933-c, available at https://www.nysenate.gov/legislation/bills/2021/S933 an express prohibition on abuse of dominance, monopsony, and monopoly, requires premerger notification from any company conducting business in the state and a copy of its HSR filing, bans restrictions on worker's mobility, directs AG to consider impact of mergers on labor markets, presumes seller with 40% market share and buyer with 30% to have dominant position, permits class actions and limits procompetitive justifications.
   b. The bill has passed in the New York Senate on May 25, 2022, but has not passed in the New York Assembly.
   c. New Yorkers for a Fair Economy, *Why the 21st Century Antitrust Act is Critical for New York Workers*, May 2022, available at http://www.economicliberties.us/wp-content/uploads/2022/05/NYFE-Paper-3.pdf (concentration of companies has limited workers job opportunities and wages)
   d. Cleary Gottlieb, *The 21st Century Antitrust Act Raises the Risks of Doing Business in New York, June 8, 2021*, available at https://www.clearygottlieb.com/news-and-insights/publication-listing/the-twenty-first-century-antitrust-act-raises-the-risks-of-doing-business-in-new-york (Act's adoption of market presumptions and European-style "abuse of dominance" could limit beneficial competition, businesses could be at risk of criminal penalties for conduct that seemed lawful, and merger notice filing requirements will seriously burden many businesses)

2. Hearing on New York's Twentieth Century Antitrust Act before the State Senate on 9/14/2020.
   a. The hearing can be watched at https://www.youtube.com/watch?v=RoUaHWFkLDE
   b. Witnesses at the hearing who testified in support (unless noted otherwise), opposition or modification of the New York bill were:
      i. Letitia James, New York Attorney General
      ii. Kathy Wyde, CEO of Partnership for the City of New York (opposed)
      iii. Jay Himes, former New York Attorney General
      iv. Scott Galloway, Marketing Professor, New York University
      v. Timothy Wu, Columbia School of Law (concerns about private enforcement)
      vi. Matt Stoller, American Economic Liberties Project
      vii. Ken Pokalsky, Vice President, Business Council (opposed)
      viii. Lev Ginsburg, Senior Director of Government Affairs, Business Council (opposed)
      ix. Harry First, Law Professor, New York University School of Law (opposed to criminal liability for abuse of dominance, would eliminate

monopolization in favor of abuse of dominance and would have three year delay on any private enforcement)

x. Shaoul Sussman, Legal Fellow, Institute of Local Reliance
xi. Sally Hubbard, Director of Enforcement Strategy, Open Markets Institute (formerly at the New York AG)
xii. Alec Stapp, Director of Progressive Policy Institute (opposed and believes big tech lacks monopoly power)
xiii. Christopher Marchese, Policy Counsel, Net Choice (opposed)

Many of these witnesses indicated that they have submitted lengthier witness statements which I am trying to locate.

3. Response from the Antitrust Section of the New York City Bar Association.
   a. Report of the Section opposing the bill (to the extent it did not mirror existing federal law) is available at: https://www.nycbar.org/member-and-career-services/committees/reports-listing/reports/detail/twenty-first-century-anti-trust-act
   b. Head of New York City Bar Association Antitrust Section and author of response is Yee Wah Chin, Chair, (212) 907-9613 and her email is YeeWah.Chin@gmail.com. Secretary of the organization is Rachel Webb, (212) 482-0001 and her email is Webbrf@gmail.com We Yee
   c. Additional contact for committee is Jack Lerner whose email is jack.Lerner@usdoj.com or jackglerner@gmail.com

4. Contacts for Senators Involved in the 9/14/2020 hearing on Bill 933C
   a. The 933C Bill was drafted by Senator Michael Gianaris
      a. His contact information: Capitol Building, Room 427,Albany, NY 12247, Phone: (518) 455-3486, Fax: (518) 426-6929 and his district office is at 31-19 Newtown Avenue, Suite 402, Astoria, NY 11102, where the phone is (718) 728-0960 and the fax is Fax: (718) 728-0963. His email address is gianaris@nysenate.gov
   b. Senator Brian Kavanagh was actively involved as well.
      a. His Manhattan office number is 212 298-5565 and his legislative office in Albany is 518-426-6956.
      b. His legislative director involved in 933C is Daniel Mosher at dmosher.nysenate@gmail.com
